Meet the growing challenges of diabetes and obesity management with Endocrinology: Adult and Pediatric: Diabetes Mellitus and Obesity - a new diabetes and obesity eBook from the same expert endocrinologists responsible for the highly acclaimed two-volume Endocrinology clinical reference. With all of the latest advances loaded on your favorite eReader, you'll be able to put today's best practices to work for your patients. Stay abreast of the newest knowledge and advances in diabetes mellitus and obesity, including today's increased focus on controlling autoimmunity and preserving or replenishing beta-cell mass in the management of type 1 diabetes; complications of diabetes and their pathogenesis, morbidity, and treatment; new findings and treatments for obesity; and much more. Count on all the authority that has made

Endocrinology, 6th Edition, edited by Drs. Jameson and DeGroot, the go-to clinical reference for endocrinologists worldwide. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Compatible with Kindle®, nook®, and other popular devices.

Endocrinology: Adult and Pediatric E-Book

Bibliotheca Anglo-poetica; or, A descriptive catalogue of a rare collection of early English poetry: in the possession of Longman, Hurst, Rees, Orme, and Brown. Illustr. by occasional extracts and remarks [signed A.F.G.].

Data Mining can be defined as a process of discovering new and significant relationships, patterns and trends when examining large amounts of data. The techniques of Data Mining pursue the automatic discovery of the knowledge contained in the information stored in an orderly manner in large databases. These techniques aim to discover patterns, profiles and trends through the analysis of data using advanced statistical techniques of multivariate data analysis. The goal is to allow the researcher-analyst to find a useful solution to the problem raised through a better understanding of the existing data. Data Mining uses two types of techniques: predictive techniques, which trains a model on known input and output data so that it can predict future outputs, and descriptive techniques, which finds hidden patterns or intrinsic structures in input data. The aim of predictive techniques is to build a model that makes predictions based on evidence in the presence of uncertainty. A predictive algorithm takes a known set of input data and known responses to the data (output) and trains a model to generate reasonable predictions for the response to new data. Data Mining techniques uses neural networks classification and regression techniques to develop predictive models. -Classification techniques predict categorical responses, for example, whether an email is genuine or spam, or whether a tumor is cancerous or benign. Classification models classify input data into categories. Typical applications include medical imaging, image and speech recognition, and credit scoring. -Regression techniques predict continuous responses, for example, changes in temperature or fluctuations in power demand. Typical applications include electricity load forecasting and algorithmic trading. Descriptive techniques finds hidden patterns or intrinsic structures in data. It is used to draw inferences from datasets consisting of input data without labeled responses. Clustering is the most common descriptive technique. It is used for exploratory data analysis to find hidden patterns or groupings in data. Applications for clustering include gene sequence analysis, market research, and object recognition. This book develops Data Mining techniques using neural networks classification techniques to develop descriptive models.

"Publications of the Academy of Natural Sciences of Philadelphia": v. 53, 1901, p. 788-794.

Cypriot Ceramics

The pedigree of man, and other essays, tr. by E.B. Aveling

This is an introductory physical geography text designed for 1st or 2nd year undergraduate students of geography, geology and environmental sciences.

A Descriptive Analysis of the Insurance Industry in the United States

A translation of "Guide de conception et de gestion des reseaux d'assainissement unitaires", this text looks at the design and management of combined sewerage networks, covering topics such as: data on rainstorm run-off pollution; different types of weirs and accessories; and choice of weir.

Descriptive Psychopathology

The First International Leo Kanner Colloquium on Child Development, Deviations, and Treatment explores relationships between experimental research, normal development, and interventions, with early infantile autism as a reference model of "relatively unambiguous abnormal development." Sponsored by the Treatment and Education of Autistic and related Communications handicapped Children (TEACCH) Project at the University of North Carolina at Chapel Hill, the colloquium tackled the challenge of facilitating communications among scientists of different disciplines working in a specialized area. The meeting proved successful in generating an interplay and information exchange among scientists of diverse academic and professional orientation, who, if not completely able to agree on common factors, did nevertheless achieve awareness and clarification of their differences. The TEACCH conference and this volume have implications for all research efforts, within and outside the domain of mental health. This is particularly so at a time of limited dollar resources for research support. The present and foreseeable future represent such a time-one when communication among fields, resource competition between basic and applied research, biomedical versus psychosocial research, and the question of research utilization assume a new commanding significance. Thus the question of accountability for research has come to the fore.

Comprehensive Handbook of Psychopathology

Classification in Social Research

ENDOCRINOLOGY, edited by J. Larry Jameson, MD, PhD and Leslie J. De Groot, MD, has been considered the definitive source in its field for decades. Now this landmark reference has been exhaustively updated to bring you the latest clinical guidance on all aspects of diagnosis and treatment for the full range of endocrine and metabolism disorders, including new information on diabetes, obesity, MEN I and II, disorders of sex determination, and pituitary tumors. Entirely new chapters on Lipodystrophy Syndromes, Lipoprotein Metabolism, and Genetic Disorders of Phosphate Homeostasis keep you well informed on today's hot topics. You'll benefit from unique, global perspectives on adult and pediatric endocrinology prepared by an international team of renowned authorities. This reference is optimally designed to help you succeed in your demanding practice and ensure the best possible outcomes for every patient. Overcome virtually any clinical challenge with detailed, expert coverage of every area of endocrinology, authored by hundreds of leading luminaries in the field. Provide state-of-the-art care with comprehensive updates on diabetes, obesity, MEN I and II, disorders of sex determination, and pituitary tumors brand-new chapters on Lipodystrophy Syndromes, Lipoprotein Metabolism, and Genetic Disorders of Phosphate Homeostasis expanded coverage of sports performance, including testosterone, androgen research, and bone growth and deterioration and the newest discoveries in genetics and how they affect patient care. Make the best clinical decisions with an enhanced emphasis on evidence-based practice in conjunction with expert opinion. Rapidly consult with trusted authorities thanks to new expert-opinion treatment strategies and recommendations. Zero in on the most relevant and useful references with the aid of a more focused, concise bibliography. Locate information more quickly, while still getting the complete coverage you expect.

International Classification and Diagnosis

Proceedings

DATA MINING with MATLAB. DESCRIPTIVE CLASSIFICATION TECHNIQUES

Considered the definitive source in its field for over 35 years, Endocrinology: Adult and Pediatric, has been thoroughly updated to reflect today's recent advances in adult and pediatric endocrinology. Unique perspectives from a team of trusted, world-renowned experts ensure this medical reference book remains the most highly-regarded text in the field. Make the best clinical decisions with an enhanced emphasis on evidence-based practice and expert opinions on treatment

strategies. Zero in on the most relevant and useful references with the aid of a more focused, concise bibliography. Locate information quickly, while still getting the complete coverage you expect. Expanded coverage for key topics such as pediatric endocrinology and obesity mechanisms and treatment, in addition to today's hot topics in endocrinology, including endocrine disruptors, bariatric surgery, androgen deficiency, genetic causes of obesity, endocrine rhythms, and the use of tyrosine kinase inhibitors in thyroid cancer. New content addressing the latest advances in testosterone and estrogen replacement, as well as the new causes of calcium and phosphate disorders, new molecular causes of endocrine cancers, new genetic causes of reproductive disorders, and more. Updated clinical guidelines for diabetes, lipid disorders, obesity management, osteoporosis, and more, as well as essential treatment updates for the medical management of acromegaly, Cushing's Disease, hypercalcemia, and diabetes mellitus. New Key Points provide snapshots of what to expect in each chapter, or serve as a refresher of what you just read. Consult this title on your favorite e-reader.

Contributions from the Zoological Laboratory

Descriptive Physical Oceanography

In order to accurately describe and diagnose psychiatric illness, practitioners require in-depth knowledge of the signs and symptoms of behavioral disorders. Descriptive Psychopathology provides a broad review of the psychopathology of psychiatric illness, beyond the limitations of the DSM and ICD criteria. Beginning with a discussion of the background to psychiatric classification, the authors explore the problems and limitations of current diagnostic systems. The following chapters then present the principles of psychiatric examination and diagnosis, described with accompanying patient vignettes and summary tables, and related to different diagnostic concerns. A thought-provoking conclusion proposes a restructuring of psychiatric classification based on the psychopathology literature and its validating data. Written for psychiatry and neurology residents, clinical psychologists, behavioral neurologists, clinical psychology students and psychiatric nurse practitioners, it is invaluable to anyone who accepts the responsibility for the care of patients with behavioral syndromes.

The Inlander

The purpose of this handbook, originally published in 1984, was to provide a comprehensive review of current clinical descriptions, research, and theories of psychopathology. Descriptive psychopathology is a field that forms the foundation of clinical practice and research in clinical psychology, psychiatry, psychiatric social work, psychiatric nursing, and allied professions in mental health. Since the 1st edition, the editors have devised and updated a handbook to cover both general and specific topics in psychopathology that would be useful to researchers, practitioners, and graduate or other advanced students in the mental health and behavioral medicine professions. To implement this plan, we have very carefully chosen colleagues whom we respect for their expertise in particular fields. These authors include both clinicians and researchers who have outstanding national reputations, as well as more junior behavioral scientists and clinicians who, in our opinion, will achieve similar recognition in the future. The excellent chapters in this book lead us to believe that we have chosen wisely. We would like to express our appreciation to these authors for their outstanding contributions and cooperation.

Psychopathology and Child Development

"Assessment with the WAIS-IV is designed as both a teaching text and a reference source for students and professionals. The text provides an in-depth analysis of a major instrument useful for the cognitive assessment of older adolescents and adults."--Preface.

Generalized Descriptive Set Theory and Classification Theory

This book constitutes the refereed proceedings of the Third International Conference on the Theory of Information Retrieval, ICTIR 2011, held in Bertinoro, Italy, in September 2011. The 25 revised full papers and 13 short papers presented together with the abstracts of two invited talks were carefully reviewed and selected from 65 submissions. The papers cover topics ranging from query expansion, co-occurrence analysis, user and interactive modelling, system performance prediction and comparison, and probabilistic approaches for ranking and modelling IR to topics related to interdisciplinary approaches or applications. They are organized into the following topical sections: predicting query performance; latent semantic analysis and word co-occurrence analysis; query expansion and re-ranking; comparison of information retrieval systems and approximate search; probability ranking principle and alternatives; interdisciplinary approaches; user and relevance; result diversification and query disambiguation; and logical operators and descriptive approaches.

Contributions from the Zoological Laboratory of the University of Pennsylvania

The classification of mental disorders improved greatly in the last decade of the 20th century and now provides a reliable operation tool. The first set of papers in this publication present the views on international classification and diagnosis of the WHO and the APA as well as the results of a large international survey on the usage and perceived value of ICD-10 and related diagnostic systems. The second group of papers topically review international experience with current diagnostic systems. The third set delves into some of the key conceptual bases for the development of future diagnostic systems. The fourth group review ongoing work on adaptations of and complements to the ICD. The last section offers incisive commentaries on integrative approaches and future steps. Summarizing the current knowledge of the field of the international system for classification and diagnosis this publication is essential reading for psychiatrists, psychologists as well as public health services.

DATA MINING with MATLAB. DESCRIPTIVE CLASSIFICATION TECHNIQUES with NEURAL NETWORKS

The purpose of the study is to describe the classification and assignment process applied to men entering military service and to similarly describe the process followed for their separation from the service. Special attention is given to how previously acquired skills are identified and acted upon and how the recruit's occupational preferences and interests are related to his classification and assignment. The nature of the counselling, training, and placement activities is the focal point of the description of the separation process. Information was obtained from a review of official policies, procedures, and manuals; interviews with staff members; and observation of the classification, assignment, and separation processes. A comparative analysis was made of the procedures of the Air Force, Army, Marine Corps, and Navy. (Author).

Proceedings of the Academy of Natural Sciences of Philadelphia

Bulletin of the International Association of Medical Museums

Assessment with the WAIS-IV

The availability of large volumes of data and the generalized use of computer tools has transformed research and data analysis, orienting it towards certain specialized techniques encompassed under the generic name of Analytics that includes Multivariate Data Analysis (MDA), Data Mining and other Business Intelligence techniques. Data Mining can be defined as a process of discovering new and significant relationships, patterns and trends when examining large amounts of data. The techniques of Data Mining pursue the automatic discovery of the knowledge contained in the information stored in an orderly manner in large databases. These techniques aim to discover patterns, profiles and trends through the analysis of data using advanced statistical techniques of multivariate data analysis. The goal is to allow the researcher-analyst to find a useful solution to the problem raised through a better understanding of the existing data. Data Mining uses two types of techniques: predictive techniques, which trains a model on known input and output data so that it can predict future outputs, and descriptive techniques, which finds hidden patterns or intrinsic structures in input data. Descriptive techniques finds hidden patterns or intrinsic structures in data. It is used to draw inferences from datasets consisting of input data without labeled responses. Clustering is the most common descriptive technique. It is used for exploratory data analysis to find hidden patterns or groupings in data. Applications for clustering include gene sequence analysis, market research, and object recognition. This book develops classification descriptive techniques.

Endocrinology Adult and Pediatric: Diabetes Mellitus and Obesity E-Book

Vols. for 189 --1956-58 are reprinted from various scientific journals.

Proceedings of the Sixth Asian Logic Conference

A Geological Classification of Rocks, with Descriptive Synopses of the Species and Varieties, Comprising the Elements of Pratical Geology

This volume comprises a collection of twenty written versions of invited as well as contributed papers presented at the conference held from 20-24 May 1996 in Beijing, China. It covers many areas of logic and the foundations of mathematics, as well as computer science. Also included is an article by M. Yasugi on the Asian Logic Conference which first appeared in Japanese, to provide a glimpse into the history and development of the series.

Advances in Information Retrieval Theory

Physical Geography

The Manchester Flora: a Descriptive List of the Plants Growing Wild Within Eighteen Miles of Manchester, with Notices of the Plants Commonly Cultivated in Gardens; Preceded by an Introduction to Botany

The use of a widely accepted diagnostic classification is vital for the effective treatment of psychiatric patients, and is essential in research. This pocket-book version of Chapter V of the 10th revision of the International Classification of Diseases and Related Health Problems (ICD-10) will facilitate both practice and research. It provides a quickly accessible and easy-to-use source of information about the new classification. The book has been compiled with a range of users in mind, including psychiatrists of all grades of seniority and experience, researchers, medical records staff and data analysts. Managers and other non-medically qualified mental health professionals will also find it useful. Compiled by a psychiatrist, this pocket-book is practical and clinical in its approach, and brings together in one place all major aspects of the description and diagnosis of psychiatric disorders.

Pocket Guide to the ICD-10 Classification of Mental and Behavioural Disorders

This important work is addressed to all researchers concerned with classification. It shows the serious limits of the traditional form of analytical classification. The solution it proposes, the inductive population approach, considers all possible cross-classifications in regard to attributes of the phenomena. This approach is theoretically grounded, avoids the tendency to generate excessively abstract constructs, and provides a clear way of linking empirical data with theoretically meaningful attributes of social systems. The last section of the book applies the method to kinship structures.

A Companion to the Classification of Mental Disorders

Descriptive set theory is mainly concerned with studying subsets of the space of all countable binary sequences. In this paper the authors study the generalization where countable is replaced by uncountable. They explore properties of generalized Baire and Cantor spaces, equivalence relations and their Borel reducibility. The study shows that the descriptive set theory looks very different in this generalized setting compared to the classical, countable case. They also draw the connection between the stability theoretic complexity of first-order theories and the descriptive set theoretic complexity of their isomorphism relations. The authors' results suggest that Borel reducibility on uncountable structures is a model theoretically natural way to compare the complexity of isomorphism relations.

Memoir

A Descriptive Analysis of the Classification, Assignment, and Separation Systems of the Armed Services

Congress of Arts and Science: History of language. History of literature. History of art

A Companion to the Classification of Mental Disorders provides essential reading as a background and supplement to both the recently produced DSM-5 and the forthcoming ICD-11. It focuses on the processes of classification and diagnosis, and the uses for these classifications. The book emphasises the dangers of regarding any current psychiatric classification as true or complete, in view of the present partial state of knowledge about the causes and mechanisms of most mental and behavioural disorders. This book is unique in containing a number of chapters that give a brief history of the cooperative efforts and projects necessary for the production of internationally agreed psychiatric classifications. The discussion begins in 1965 with the US/UK Diagnostic study, the preparations for ICD-8 with its first international glossary, and the International Pilot Study of Schizophrenia, designed and coordinated by the World Health Organization. While recognizing the importance of the innovations of the DSM series of classifications of the American Psychiatric Association, the book also takes a truly international perspective. The expert authors are well placed to do this, having been personally involved in many of the collaborative studies and developments discussed. A Companion to the Classification of Mental Disorders is an illustration of how much international collaborative work has been necessary over several decades to produce the currently agreed classifications. There is still a long way to go, but a start has been made.
