Growth Triumphant

Taking a longer view than most literature on economic development, Richard A. Easterlin stresses the enormous contrast between the collective experience of the last half century in both developed and developing countries and what has gone before. An economic historian and demographer, the author writes in the tradition of the "new economic history," drawing on economic theory and quantitative evidence to interpret the historical experience of economic theory and population growth. He reaches beyond the usual disciplinary limits to draw, as appropriate, on sociology, political science, psychology, anthropology, and the history of science. The book will be of interest not only to social scientists but to all readers concerned with where we have been and where we are going. ". . . Easterlin is both an economic historian and a demographer, and it is the combination of these two disciplines and the fine balance between theory and experience that make this well-written, refreshingly optimistic book excellent reading." --Population and Development Review "In this masterful synthesis, Richard Easterlin draws on the disciplines of economic history, demography, sociology, political science, psychology, and the history of science to present an integrated explanation of the origins of modern economic growth and of the mortality revolution. . . . His book should be easily accessible to non-specialists and will give them a sense of why

economic history can inform our understanding of the future." --Dora L. Costa, Massachusetts Institute of Technology, EH.Net and H-Net "Growth Triumphant is, simply, a fascinating book. Easterlin has woven together a history of economic growth, economic development, human mortality and morbidity, the connections each has with the others, and the implications of this nexus of forces on the future. . . . This book deserves a wide audience." --Choice "In what must surely be the most fair-minded, well-balanced, and scrupulously reasoned and researched book on the sensational subjects implied in its title--the Industrial Revolution, the mortality and fertility revolutions, and the prospects for future happiness for the human race--Professor Easterlin has set in place the capstone of his research career." --Journal of Economic History Richard A. Easterlin is Professor of Economics, University of Southern California.

The Dictionary of Health Economics, Third Edition

The only introductory economics text to equip students to address today's pressing problems by mastering the conceptual and quantitative tools of contemporary economics. OUP has partnered with the international collaborative project of CORE researchers and teachers to bring students a book and learning system that complements and enhances CORE's open-access online e-book. The Economy is a new approach that integrates recent developments in economics including contract theory, strategic interaction, behavioural economics and financial instability. It challenges students to address inequality, climate change, economic instability, wealth creation and innovation and other problems. It has been adopted as the standard principles course at University College London, Sciences Po Paris and the Toulouse School of Economics. A new economics for the principles course The Economy begins with social interactions using elementary game theory and institutions modelled as rules of the game. This provides the basis for a modern treatment of markets including price-making as well as price-taking, the exercise of power, and the importance of social norms and adjustment to disequilibria. Introducing labour and credit markets with incomplete contracts allows a consistent treatment of aggregate employment and fluctuations without the need for ad hoc sticky price and wage assumptions. Banks create money by extending credit and a central bank seeks to implement a target inflation rate. Growth and instability are illustrated from the Great Depression, through the post-war golden age of capitalism through to the financial crisis and ensuing uncertainties. Students acquire an understanding of the past and current evolution of the economy in its social and environmental context, equipping them to marshal evidence and articulate positions about contemporary policy issues.
