Corporate social responsibility (CSR) expresses a fundamental morality in the way a company behaves toward society. It follows ethical behavior toward stakeholders and recognizes the spirit of the legal and regulatory environment. The idea of CSR gained momentum in the late 1950s and 1960s with the expansion of large conglomerate corporations and became a popular subject in the 1980s with R. Edward Freeman's *Strategic Management: A Stakeholder Approach* and the many key works of Archie B. Carroll, Peter F. Drucker, and others. In the wake of the financial crisis of 2008–2010, CSR has again become a focus for evaluating corporate behavior. First published in 1953, Howard R. Bowen's *Social Responsibilities of the Businessman* was the first comprehensive discussion of business ethics and social responsibility. It created a foundation by which business executives and academics could consider the subjects as part of strategic planning and managerial decision-making. Though written in another era, it is regularly and increasingly cited because of its relevance to the current ethical issues of business operations in the United States. Many experts believe it to be the seminal book on corporate social responsibility. This new edition of the book includes an introduction by Jean-Pascal Gond, Professor of Corporate Social Responsibility at Cass Business School, City University of London, and a foreword by Peter Geoffrey Bowen, Daniels College of Business, University of Denver, who is Howard R. Bowen's eldest son.

The aim of these two books is to provide the basic theoretical concepts and the best practice concerning the mathematical finance which is unescapable to understand the way modern financial markets operate. Thanks to these fundamental concepts, which are completely concentrated on a deterministic modelization of the markets, students are ready to approach more advanced courses focused on the modern area of financial math where the deterministic assumption is left and stochastic assumptions concerning the evolution of the involved variables are included.

With the Bologna Accords a bachelor-master-doctor curriculum has been introduced in various countries with the intention that students may enter the job market already at the bachelor level. Since financial Institutions provide non negligible job opportunities also for mathematicians, and scientists in general, it appeared to be appropriate to have a financial mathematics course already at the bachelor level in mathematics. Most mathematical techniques in use in financial mathematics are related to continuous time models and require thus notions from stochastic analysis that bachelor students do in general not possess. Basic notions and methodologies in use in financial mathematics can however be transmitted to students also without the technicalities from stochastic analysis by using discrete time (multi-period) models for which general notions from Probability suffice and these are generally familiar to students not only from science courses, but also from economics with quantitative curricula. There do not exists many textbooks for multi-period models and the present volume is intended to fill in this gap. It deals with the basic topics in financial mathematics and, for each topic, there is a theoretical section and a problem section. The latter includes a great variety of possible problems with complete solution.

This volume discusses the promises and the challenges behind the use of gamification in public governance, both at the national and supranational levels. The first section reviews the landscape of gamification--taking a brief look at its history, providing definitions and examples of its application within the private and public sectors (at the national level), and introducing the readers to a number of problems linked with the use of gamification. The second part shifts the focus from the descriptive to the problematic analysis of gamification in governance. The third section ventures beyond the empirical analysis to address the impact of gamification strategies on participatory democracy in the national and supranational legal spaces.

Born Liquid is the last work by the great sociologist and social theorist Zygmunt Bauman, whose brilliant analyses of liquid modernity changed the way we think about our world today. At the time of his death, Bauman was working on this short book, a conversation with the Italian journalist Thomas Leoncini, exactly sixty years his junior. In these exchanges with Leoncini, Bauman considers, for the first time, the world of those born after the early 1980s, the individuals who were 'born liquid' and feel at home in a society of constant flux. As always, taking his cue from contemporary issues and debates, Bauman examines this world by discussing what are often regarded as its most ephemeral features. The transformation of the body - tattoos, cosmetic surgery, hipsters - aggression, bullying, the Internet, online dating, gender transitions and changing sexual preferences are all analysed with characteristic brilliance in this concise and topical book, which will be of particular interest to young people, natives of the liquid modern world, as well as to Bauman's many readers of all generations.

Technological pedagogical content knowledge (TPCK) reflects a new direction in understanding the complex interactions among content, pedagogy, learners and technology that can result in successful integration of multiple technologies in teaching and learning. The purpose of this edited volume is to introduce TPCK as a conceptual framework for grounding research in the area of teachers' cognitive understanding of the interactions of technology with content, pedagogy and learner conceptions. Accordingly, the contributions will constitute systematic research efforts that use TPCK to develop lines of educational technology research exemplifying current theoretical conceptions of TPCK and methodological and pedagogical approaches of how to develop and assess TPCK.

This work has been conceived as a resource for graduate students of a course in Translation Studies, focused both on the main theoretical issues of the discipline and on the practical task of translating, in particular from English into Italian. Within a wide range of different contemporary approaches and methods, the purpose of Translating Text and Context is to offer a particular perspective on the theory and practice of translation, that of the framework of Systemic Functional Linguistics (SFL), which, we believe, can prove valuable for the study of a phenomenon that we consider z[] a complex linguistic, socio-cultural and ideological practicey.
