I have owned parakeets (also called budgies or keets) since I was a tiny toddler. I have photos of my pregnant-with-me-mom's parakeet (named Gandalf), so she owned parakeets even before I was born. Sometimes I've had four parakeets, sometimes just one, but in one way or another parakeets manage to wiggle their fluffy ways into my heart. This book is a compilation of my years of experience, not only with my own parakeets, but also with helping the tens of thousands of parakeet-loving visitors who come to my parakeet forum. Between the group of us we've probably experienced everything there is that could happen to a keet, good or bad. There is information on choosing a parakeet, feeding a parakeet, and full step by step instructions on hand training your parakeet. You can learn about parakeet activities, parakeet toys, and parakeet socialization. While the web is of course an awesome resource, often there are times that it's simply easier to read an organized, sequential set of instructions on an e-reader. Also, it seems that web access goes down during emergency situations! Having an ebook version of those "what to do" instructions available on your e-reader has saved many a keet owner. Think of it as part of your emergency care kit for your beloved pet. If you have any questions, always feel free to email me! I'm happy to lend a hand with keets. Enjoy!

### **Bird Love**

On September 6, 2007, an African Grey parrot named Alex died prematurely at age thirty-one. His last words to his owner, Irene Pepperberg, were "You be good. I love you." What would normally be a quiet, very private event was, in Alex's case, headline news. Over the thirty years they had worked together, Alex and Irene had become famous—two pioneers who opened an unprecedented window into the hidden yet vast world of animal minds. Alex's brain was the size of a shelled walnut, and when Irene and Alex first met, birds were not believed to possess any potential for language, consciousness, or anything remotely comparable to human intelligence. Yet, over the years, Alex proved many things. He could add. He could sound out words. He understood concepts like bigger, smaller, more, fewer, and none. He was capable of thought and intention. Together, Alex and Irene uncovered a startling reality: We live in a world populated by thinking, conscious creatures. The fame that resulted was extraordinary. Yet there was a side to their

relationship that never made the papers. They were emotionally connected to one another. They shared a deep bond far beyond science. Alex missed Irene when she was away. He was jealous when she paid attention to other parrots, or even people. He liked to show her who was boss. He loved to dance. He sometimes became bored by the repetition of his tests, and played jokes on her. Sometimes they sniped at each other. Yet nearly every day, they each said, "I love you." Alex and Irene stayed together through thick and thin—despite sneers from experts, extraordinary financial sacrifices, and a nomadic existence from one university to another. The story of their thirty-year adventure is equally a landmark of scientific achievement and of an unforgettable human-animal bond.
