This is the first comprehensive introduction to the concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to instructors who are using this book in their courses. For access to the solutions manual, please contact marketing@www.sup.org.

Appropriate for any course introducing management information systems from a business perspective. This casebook will serve as an ideal complement to most MIS/CIS textbooks. Designed to demonstrate how software can support managerial decision-making activities, this casebook features 24 cases (more than another casebook currently on the market) covering a wide range of functional areas throughout the business, including finance/accounting, HR, production, and information systems. The cases are spread across three difficulty levels basic, intermediate, and advanced. They present common managerial issues and problems, and encourage students to actually use their models to make decisions for the cases characters. They require students to apply spreadsheet, database, Web-page development, and/or presentation graphics software, often in an integrated manner. Many of the cases require students to prepare both written and oral presentations on their solutions. Among the topics covered in MIS Cases: Decision Making with Application Software Second Edition: forecasting, inventory decisions, what-if analyses, pricing strategies, billing decisions, and much more.

Portelli offers a new and challenging approach to oral history, with an interdisciplinary and multicultural perspective. Examining cultural conflict and communication between social groups and classes in industrial societies, he identifies the

way individuals strive to create memories in order to make sense of their lives, and evaluates the impact of the fieldwork experience on the consciousness of the researcher. By recovering the value of the story-telling experience, Portelli's work makes delightful reading for the specialist and non-specialist alike.

Return to Kiss River in the second emotional novel in the acclaimed trilogy from bestselling author Diane Chamberlain. Separated by a continent from her child, Gina Higgins comes to Kiss River with little more than a desperate plan. Now, saving her daughter depends on whether she can uncover a message buried deep below the ocean's surface. Kiss River's historic nineteenth-century lighthouse has all but fallen into the sea, taking with it the huge Fresnel lens that once served as its beacon. Gina is desperate to find a way to raise the lens; the glass holds the key to her future, her fortune and her only chance to save the one person who matters to her. Clay O'Neill lives in the old light keeper's house, a home he shares with his sister, Lacey. When Lacey invites her to stay with them, Gina eagerly accepts. As Gina begins her quest to raise the lens, Clay finds himself drawn to her struggle, and to Gina herself. But the answers lie deep below the ocean. And the lighthouse holds secrets that neither Clay nor Gina can anticipate... Originally published in 2003

Trains don't sleep, they CLANG and HOOT
Cross bridges and canyons,

And when it is time to rest
