In 1996 the Institute of Medicine launched the Quality Chasm Series, a series of reports focused on assessing and improving the nation's quality of health care. Preventing Medication Errors is the newest volume in the series. Responding to the key messages in earlier volumes of the series—"To Err Is Human (2000), Crossing the Quality Chasm (2001), and Patient Safety (2004)"—this book sets forth an agenda for improving the safety of medication use. It begins by providing an overview of the system for drug development, regulation, distribution, and use. Preventing Medication Errors also examines the peer-reviewed literature on the incidence and the cost of medication errors and the effectiveness of error prevention strategies. Presenting data that will foster the reduction of medication errors, the book provides action agendas detailing the measures needed to improve the safety of medication use in both the short- and long-term. Patients, primary health care providers, health care organizations, purchasers of group health care, legislators, and those affiliated with providing medications and medication-related products and services will benefit from this guide to reducing medication errors.

Pain is both a symptom and a disease. It manifests in multiple forms and its treatment is complex. Physical, social, economic, and emotional consequences of pain can impair an individual's overall health, well-being, productivity, and relationships in myriad ways. The impact of pain at a population level is vast and, while estimates differ, the Centers for Disease Control and Prevention reported that 50 million U.S. adults are living in pain. In terms of pain's global impact, estimates suggest the problem affects approximately 1 in 5 adults across the world, with nearly 1 in 10 adults newly diagnosed with chronic pain each year. In

recent years, the issues surrounding the complexity of pain management have contributed to increased demand for alternative strategies for treating pain. One such strategy is to expand use of topical pain medications—medications applied to intact skin. This nonoral route of administration for pain medication has the potential benefit, in theory, of local activity and fewer systemic side effects. Compounding is an age-old pharmaceutical practice of combining, mixing, or adjusting ingredients to create a tailored medication to meet the needs of a patient. The aim of compounding, historically, has been to provide patients with access to therapeutic alternatives that are safe and effective, especially for people with clinical needs that cannot otherwise be met by commercially available FDA-approved drugs. *Compounded Topical Pain Creams* explores issues regarding the safety and effectiveness of the ingredients in these pain creams. This report analyzes the available scientific data relating to the ingredients used in compounded topical pain creams and offers recommendations regarding the treatment of patients.

A comprehensive and easy-to-follow guide to good practice in extemporaneous compounding. It incorporates the key findings and outputs from the UK National Advisory Board study, including advice on purchasing unlicensed medicines. It will be adopted as the standard for extemporaneous dispensing for NHS patients. Although the standards set out in this book are primarily written for implementation in NHS hospitals, the principles should be equally applied across the profession internationally. Written in two parts, this book provides: standards for extemporaneous dispensing stability summaries for the 50 most commonly prepared extemporaneously prepared medicines in NHS hospitals. Compounding of pharmaceutical formulations remains a core skill of pharmacists and is taught at undergraduate level. Written by experts in the field with input from the UK NHS Pharmaceutical Quality Assurance Committee, this book will be an invaluable reference for any clinical or procurement pharmacist, pharmacy technician or student involved with extemporaneous preparation.

### **Suppositories**

This is an essential resource for all those involved in the formulation, development, manufacture and testing of suppositories. The administration of drugs using a suppository base formulation is particularly useful in paediatrics, debilitated patients and 'non-oral' patients. Depending on the excipient used, it is possible to control the release of the active pharmaceutical ingredient, thus offering some advantages in specific drug regimens over other dosage forms. Many suppository formulations have been developed for a number of therapeutic aims, however comprehensive reliable information on suppository formulation is not always readily available. "Suppositories" resolves this situation by providing up-to-date, comprehensive information in one point of reference. "Suppositories" provides a detailed review of suppository dosage forms with chapters covering: the history and development of the suppository; suppository bases and their characteristics; pharmaceutical, biopharmaceutical and pharmacokinetic factors; formulation considerations; manufacturing and compounding suppositories; special types of suppositories; quality control; packaging and labelling; stability and storage; and clinical considerations. This book is an essential resource for all those involved in the formulation, development, manufacture and testing of suppositories.

This book provides a list of concise extemporaneous ophthalmic preparations, and standardizes the formulation of the products by suggesting specific strength, route of administration, appropriate vehicle, and method of preparation. Pharmaceutical industries have greatly expanded their share of ophthalmic drugs in recent years. However, physicians and pharmacists are frequently called to prepare sterile products intended for ophthalmic use due to lack of availability of licensed drugs in the market. This book contains the most appropriate formulation of each medication based on published and documented stability data. Extemporaneous Ophthalmic Preparations is the first book of its kind, making it a unique and valuable companion for many physicians and pharmacy practitioners who are frequently engaged in the compounding of sterile ophthalmic preparation.
