HBR Guide to Performance Management (HBR Guide Series)

From the earliest workshop days to the grandest marque in the automotive world, the story of one of the most important enterprises of the twentieth century comes alive in this complete history. The rich history of Daimler-Benz (now DaimlerChrysler) has its roots in the early experimentation with the use of the internal combustion engine by three men: Carl Benz, Gottlieb Daimler, and William Maybach. Benz, working alone, and Daimler and Maybach, working together, the two shops separated by a mere sixty miles, in the late 1880s simultaneously laid the foundation of what would become the German automotive industry. At first there was competition between Benz & Cie. and Daimler Motoren Gesellschaft, as they engineered and styled the earliest motorwagens and began to develop markets for their products. These early efforts led to the establishment of an entire industry by the start of World War I. But the war and its aftermath devastated these two companies, as it did the German economy overall. By the early 1920s it became apparent that the only way to survival was a merger, and thus, on June 29, 1926, the stockholders of both companies gave approval to the new company, Daimler-Benz, which led directly to the birth of one of the world's best-known brands: Mercedes-Benz. In the hands of noted automotive photographer, author, and editor Dennis Adler, the history of the marque and the company unfolds through the decades, as Mercedes-Benz advances in fame, from the racing glory years to the present, becoming the standard that all automakers strive to meet. With archival (many never before published) and the author's own photographs, the beauty and power of the automobile comes alive, from the earliest models to the first crop of twenty-first-century Mercedes-Benzenes. It is a story of excellence that is in many ways unmatched in the history of any industry. Today, as a global leader in design, safety, and overall excellence, Mercedes-Benz continues to lead the way.

Already the winner in 2010, Max Biaggi confirmed he was still at the top of the Superbike World Championship by winning the 2012 title in the saddle of an Aprilia. After taking his second world title, he announced his retirement from competition. So the 2013 Superbike World Championship opens without a reigning champion, but it is still packed with excitement. The Superbike World Championship story is once again told in the official, annual, reference book published by Giorgio Nada Editore on the world of bikes "derived from normal production", the machines that for many years have been the heart and soul of sports motorcycling, uniting competition with a high technological content. To illustrate the book there are the inevitable, spectacular pictures by Fabrizio Porrozzì, with the precise, accurate text by his brother Claudio.

Be Still and Know

Grounded in primary source research, this boldly revisionist book examines the doctrine of salvation in Oneness Pentecostalism (United Pentecostal Church) from its origins through its several developmental stages. The gradual rise of a literal interpretation of Acts 2.38 eliminated a tradition of doctrinal diversity within Oneness thought which regarded salvation as occurring at repentance prior to water and Spirit baptism. With this development a main link to the wider stream of evangelical Christianity was severed. The "water and Spirit" theology resulted in a form of Christianity which does not necessarily require the cross in any meaningful sense for salvation. This study recovers the lost theological tradition associated with important figures such as Howard A. Goss, A.D. Gurley, W.M. Greer, C.H. Taddon, Wynn T. Stairs, Earl Jacques, E.P. Wickens, John Paterson and the Pentecostal Church, Incorporated. Combining traditional historical methodology and theological research with the principles of a broadly based oral history, this study argues for a theological diversity within the history of Oneness Pentecostalism and in so doing bridges an important gap in the history and theology of the United Pentecostal Church.

The Second World War is the bloodiest and deadliest conflict in history: more than 60 million people killed in six years of bitter fighting. For much of that time, Hitler's Germany and the Axis powers seemed invincible and Britons feared not only for their lives but for their country's freedom and future. By 1944 the Russian army had managed to turn back the German tide in the east. The Allies desperately needed to do the same in the west. Somehow they had to break out of barricaded Britain and put troops on to mainland Europe. Only by joining the Russian march on Berlin could Britain and America hope to secure a favourable peace. D-Day to Berlin: The Unfolding Story is a unique retelling of how this was done. From June 6 1944, when hundreds of thousands of Allied troops came ashore on five Normandy beaches, to May 2 1945, when the German army surrendered in Berlin, these dramatic and historic events are described as they happened and as they were told through the pages of The Daily Mirror. A truly remarkable era experienced as never before.

Annotation. A third volume of essays from various activities and events organized by the Centre for International Borders Research at Queens University of Belfast considers three modes in the analysis of culture and cross-border

cooperation--cultures of co-operation, co-operation about culture, and the impact of culture on forms of co-operation--as possible strategies in the comparative social science of European borderlands. The case studies range from Israel's Green Line to Ulster Unionist identity. There is no index. Annotation ©2004 Book News, Inc., Portland, OR (booknews.com).

D-Day to Berlin

The landing of Allied forces on the shores of Normandy on 6 June 1944 was the greatest amphibious invasion in history. Technology and innovation played crucial parts in the D-Day drama - from tank-carrying gliders, swimming tanks and the Mulberry harbors, to radio and radar aids that ensured landing craft arrived on the right beaches and combat aircraft overhead were controlled. This manual describes the development, construction and use of a wide range of innovative

machines, structures and systems, explaining their uses on D-Day and after, and revealing how they contributed to the success of 'Overlord'.

Introduction to Semiconductor Optics

This book is targeted to the millions who work with energy and the chakras, and it aims at giving you a scientific explanation to that ancient knowledge passed on to our generation throughout the centuries by the Masters. I, in fact, make a comparison with the discoveries of a scientist and nuclear physicist named Massimo Corbucci and the ancient knowledge that we use every day. I found it amazing to discover that the atom is made of seven colors, exactly the same as the chakras and in the same order as the chakras! The scientific explanations given about past lives, symbols, the power of thought, and being able to move in time and space are extraordinary. It continues with A Spiritual Path starting in Sae Babas Ashram in India and follows with extraordinary experiences on the Himalayas with His Holiness, the Dalai Lama, for the Kalachakra ceremony. Regressions in three past lives are described as well as those past lives seen by psychics. A large section is dedicated to my direct regressions into past lives, three directly experienced, and others viewed or seen by different psychics. It continues with The vibrations of prayers and The Mystery of the Senegalese Brooch and some very recent experiences with the Entities.
