The Complete Guide to Investing in Foreclosures

A timeless, easy-to-read guide on life-long investment principles that can help any investor succeed. The Elements of Investing has a single-minded goal: to teach the principles of investing in the same pared-to-bone manner that Professor William Strunk Jr. once taught composition to students at Harvard, using his classic little book, *The Elements of Style*. With great daring, Ellis and Malkiel imagined their own Little Red Schoolhouse course in investing for every investor around the world-and then penned this book. *The Elements of Investing* hacks away at all the overtrading and over thinking so predominant in the hyperactive thought patterns of the average investor. Malkiel and Ellis offer investors a set of simple but powerful thoughts on how to challenge Mr. Market at his own game, and win by not losing. All the need-to-know rules and investment principles can be found here. Contains sound investment advice and simple principles of investing from two of the most respected individuals in the investment world. Burton G. Malkiel is the bestselling author of *A Random Walk Down Wall Street* and Charles D. Ellis is the bestselling author of *Winning the Loser's Game*. Shows how to deal with an investor's own worst enemies: fear and greed. A disciplined approach to investing, complemented by conviction, is all you need to succeed. This timely guide will help you develop these skills and make the most of your time in today's market.

This is an introduction to an investment course that focuses on basic models used in the financial industry for investment and decision making. The course begins with an overview of the investment environment in developed markets, followed by a

more in-depth analysis of key investment topics. These topics include modern portfolio theory, asset pricing models, term structure of interest rates, stock and bond portfolio management and evaluation of portfolio performance. Modern finance extensively uses the concept of arbitrage, or rather the lack of it in financial markets, and the course highlights such uses in different circumstances. The course takes a hands-on approach with the aid of a software package, Maple™, the details of which will be explained during the first lecture. Consequently, most lectures will be divided between a theoretical lecture and a lab — a practical implementation of the theoretical material of the lecture. The use of the Maple™ software in this course simulates, to a certain extent, a professional environment. It allows visualizations of different concepts, minimizes tedious algebraic calculations and the use of calculus while equipping students with intuitive understanding. This is facilitated by the symbolic power of Maple™ and its excellent graphic and animation capabilities. Institutional material is surveyed very concisely, so the reader gets an appreciation of the investment 'lay of the land'. It is enhanced by an eLearning unit, self-administrated quizzes as well as a stock market game, utilizing StockTrack™. StockTrack™ introduces students to trading in the real world by practicing different types of orders as well as introducing conventions common in the investment community.

The classic guide to constructing a solid portfolio—without a financial advisor! “With relatively little effort, you can design and assemble an investment portfolio that, because of its wide diversification and minimal expenses, will prove superior to the most professionally managed accounts. Great intelligence and good luck are not required.” William Bernstein’s commonsense approach to portfolio construction has served investors well during the past turbulent decade—and it’s what made *The Four Pillars of Investing* an instant classic when it was first published nearly a decade ago. This down-to-earth book lays out in easy-to-understand prose the four essential topics that every investor must master: the relationship of risk and reward, the history of the market, the psychology of the investor and the market, and the folly of taking financial advice from investment salespeople. Bernstein pulls back the curtain to reveal what really goes on in today’s financial industry as he outlines a simple program for building wealth while controlling risk. Straightforward in its presentation and generous in its real-life examples, *The Four Pillars of Investing* presents a no-nonsense discussion of: The art and science of mixing different asset classes into an

Whether the venture is a whaling voyage setting sail from New Bedford (as in VC’s infancy) or the latest Silicon Valley startup, VC is a state of mind as much as a way of doing business, exemplified by an appetite for seeking extreme financial rewards, a tolerance for failure and experimentation, and a faith in the promise of innovation to generate new wealth.
