Psychologists offer an increasing variety of services to the public. Among these services, psychological assessment of personality and behavior continues to be a central activity. One main reason is that other mental health professionals often do not possess a high level of competence in this area. And when dealing with children and adolescents, psychological assessment seems to take on an even greater role. Therefore, it follows that comprehensive graduate-level instruction in assessment should be a high priority for educators of psychologists who will work with these youth. This textbook is organized into three sections, consistent with the authors' approach to teaching. Part I provides students with the psychological knowledge base necessary for modern assessment practice, including historical perspectives, measurement science, child psychopathology, ethical, legal, and cultural issues, and the basics of beginning the assessment process. Part II gives students a broad review of the specific assessment methods used by psychologists, accompanied by specific advice regarding the usage and strengths and weaknesses of each method. In Part III, we help students perform some of the most sophisticated of assessment practices: integrating and communicating assessment results and infusing assessment practice with knowledge of child

development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth. A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development. For example, several of the major tests reviewed in the text, such as the Behavioral Assessment System for Children and the Child Behavior Checklist, have undergone major revisions since the publication of the last edition making the current content outdated. Further, another major test, the Conners' Rating Scales, is undergoing substantial revisions that should be completed before publication of the next edition. Finally, the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current. For example, there was a special issue of the Journal of Clinical Child and Adolescent Psychology published focusing on evidenced-based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3. This latter point reflects an important trend in the field that should influence the marketing of the book. That is, there are several initiatives being started in all of the major areas of applied psychology (e.g., school, clinical, and counseling) to promote evidenced-based assessment practices. These initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment. This has been the orientation of this textbook from its first edition: that is, Clinical Assessment of Child and Adolescent Personality and Behavior has focused on using research to guide all recommendations for practice. The ability of the textbook to

meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology.

All parents experience stress as they attempt to meet the challenges of caring for their children. This comprehensive book examines the causes and consequences of parenting distress, drawing on a wide array of findings in current empirical research. Kirby Deater-Deckard explores normal and pathological parenting stress, the influences of parents on their children as well as children on their parents, and the effects of biological and environmental factors. Beginning with an overview of theories of stress and coping, Deater-Deckard goes on to describe how parenting stress is linked with problems in adult and child health (emotional problems, developmental disorders, illness); parental behaviors (warmth, harsh discipline); and factors outside the family (marital quality, work roles, cultural influences). The book concludes with a useful review of coping strategies and interventions that have been demonstrated to alleviate parenting stress.

Today's school leaders are faced with the increasingly daunting task of leading their schools to improve, to innovate and to become ever more responsive to change. There are many resources to help schools to engage with improvement frameworks, but few that directly address the complexity of the challenges that inevitably arise along the way. Based on extensive research in the field, including the outcomes of a five-year project on school improvement and professional learning in Australia and New Zealand, *Leading Professional Learning: Practical strategies for impact in schools* identifies the challenges that school leaders face when leading professional learning and development in their schools as part of an improvement agenda. Renowned professional development expert, Helen Timperley, has collaborated with a team of prominent authors, including Fiona Ell, Deidre Le Fevre and Kaye Twyford, to uncover the reasons underpinning these challenges and to provide practical strategies on how to address them. Case studies, excerpts from real teachers' experiences and step-by-step examples of useful strategies, including the spiral of inquiry, give school leaders the tools they need to tackle complex challenges in teaching, learning, curriculum delivery and pedagogical practice in both primary and secondary settings. *Leading Professional Learning: Practical strategies for impact in schools* is a hands-on resource for school leaders to identify specific professional learning and development issues that accompany the learning and change process and to overcome them in their schools.

In 1964, the release of Dr. Bernard Rimland's book, *Infantile Autism*, revolutionized the autism field by providing the autism community with much-needed guidance on how to understand and treat individuals on the spectrum. He single-handedly realigned the field from a psychodynamic, parent-blaming perspective to a scientific, physiological course of action. This 50th anniversary edition presents the original book with contributions from leaders in the autism field, including Drs. Martha Herbert and Simon Baron-Cohen, who celebrate Dr. Rimland's exceptional work, and place his findings within the context of autism as we understand it today. Bringing Dr. Rimland's findings up to date for a new generation of readers, this book will be fascinating reading for parents and those on the autism spectrum as well as professionals working with autism and anyone with an interest in autism and/or psychological theory.

### **Infantile Autism**

This book draws on contemporary theory and recent findings to provide

researchers, professionals, undergraduate and graduate students with essential resources, allowing them to better understand and support children, youth and adults with autism and significant communication impairments. The book consists of 11 chapters organized into 3 sections detailing typical and atypical prelinguistic development for individuals on the autism spectrum, together with a range of assessment and intervention approaches that clinicians and educators can draw on in practice. The book adopts a lifespan perspective, recognizing that there is an important and particularly challenging sub-group of children on the spectrum who remain minimally verbal beyond the age of 8 years. Each chapter summarizes current research on a selected topic, identifies key challenges faced by researchers, educators and clinicians, and considers the implications for research and practice. The concluding chapter considers issues of research translation and how educators and clinicians can encourage the use of evidence-based practices for prelinguistic and minimally verbal individuals.

The state of North Carolina has had a longstanding concern and commitment to the understanding and treatment of autistic, communications handicapped children and their families. This commitment found expression in the only

comprehensive statewide program for families confronted with this disability, Division for the Treatment and Education of Autistic and related Communication handicapped CHildren (Division TEACCH). Our program staff has been privileged to respond to this commitment by developing and providing the needed services, and to engage in research informed by our clinical experience. Although many of the problems concerning these developmentally disabled children remain to be solved, substantial progress has been made during this past decade of collaboration among professionals, parents, and their government representatives. The TEACCH staff has resolved to mark the effectiveness of this collaboration by holding a series of annual conferences focused on the several major issues confronting these children and their families. The conferences are held in order to bring together the best research knowledge available to us from throughout the country, and to encourage participation by the different professional disciplines and concerned parents. In addition these annual meetings form the basis for a series of books based on the conference theme. These books are, however, not merely the published proceedings of the presented papers: some chapters are expanded from conference presentations and many others were solicited from experts in the related areas of research and their service application.

### **The Childhood Autism Rating Scale (CARS).**

Autism spectrum disorder has received increasing research in recent years, with

### **Early Intervention for Young Children with Autism Spectrum Disorder**

Though the tremendous amount of recently-emerged developmentally-oriented research has produced much progress in understanding the personality, social, and emotional characteristics of persons with intellectual disabilities (ID), there is still much we don't know, and the vast task of precisely charting functioning in all these

areas, while also identifying the associated fine-tuned, complex, and intertwined questions that crop up along the way, seems daunting and insurmountable. The goal of The Oxford Handbook of Intellectual Disability and Development is to update the field with new, precise research and sophisticated theory regarding individuals with ID provided by seasoned developmental theorists who have made original conceptual contributions to the field. This volume is divided into five general sections (ID and its connection to genetics, relationships, cognitive development, socio-emotional development, and development of language), with each focused on a domain of functioning or aspect of life that is inherent to an integrated, transactional perspective of development. While developmental approaches to understanding persons with intellectual disability will continue to emerge, this comprehensive volume is a must-read for specialists and developmental psychologists who must have the conceptual foundations for examining the developmental trajectories across persons with any of the many different ID etiologies.
