A faithful reproduction of the 1970 Floyd Clymer publication of the official Honda Factory Workshop Manual specific to the n00 50cc Super Cub series of motorcycles. This manual includes all of the data that you would expect from a factory publication for the repair and overhaul of all major and minor mechanical and electrical components. There are separate sections that deal with the repair and overhaul procedures for the engine, transmission, wheels and brakes, front forks, frame and carburetor, plus a detailed electrical service section. This is a - must have - reference for any Honda enthusiast and would certainly assist in helping any potential purchaser better understand the inner workings prior to purchasing one of these classic motorcycles. Out-of-print and unavailable for many years, this book is highly sought after on the secondary market and we are pleased to be able to offer this reproduction as a service to all Honda enthusiasts worldwide.

Since its formation in 1932, Saudi Arabia has been ruled by two interdependent families. The Al Sa'uds control politics and the descendants of Ibn Abd al-Wahhab impose Wahhabism—a violent, fanatical perversion of the pluralistic Islam practiced by most Muslims. Stephen Schwartz argues that Wahhabism, vigorously exported with the help of Saudi oil money, is what incites Palestinian suicide bombers, Osama bin Laden, and other Islamic terrorists throughout the world. Schwartz reveals the hypocrisy of the Saudi regime, whose moderate facade conceals state-sponsored repression and terrorism. He also raises troubling questions about Wahhabi infiltration of America's Islamic community and about U.S. oil companies sanitizing Saudi Arabia's image for the West. This sharp analysis and eye-opening expose illuminates the background to the September 11th terrorist attacks and offers new approaches for U.S. policy toward its closest ally in the Middle East.

This second edition of "SOS" provides parents with guidance for handling a variety of common behavior problems based on the behavior approach to child rearing and discipline. This approach suggests that good and bad behavior are both learned and can be changed, and proposes specific methods, skills, procedures, and strategies for parents to use in getting improved behavior from their children. The guide is divided into four sections. Section 1 presents some fundamentals of child behavior and effective discipline. Some of the causes of children's misbehavior are examined as well as ways of increasing good behavior and

eliminating bad ones. Section 2 provides advice for implementing the "time-out" method. Section 3 gives suggestions on how to: (1) manage bad behavior away from home; (2) use points, tokens, and contracts; (3) use time-out on two children at the same time; (4) use time-out on a toy instead of the child; (5) handle aggressive and dangerous behavior; and (6) help children express feelings. Section 4 suggests some additional resources for helping children. Each chapter includes a review of the most important ideas and instructions presented. The book's two appendices include an index of problem behaviors, quizzes and answers for parents, more resources for professionals, and tear-out sheets for parents and teachers. Approximately 60 references are included. A videotape, not available from ERIC, demonstrates the child-rearing rules, and errors to avoid, as well as other child management methods. A printed "Video Leader's Guide" for the training leaders provides objectives, suggested outlines for workshops, and guidelines for discussing the behavior vignettes in the video. Workshop evaluation forms and handouts are appended. A parent audio cassette on how to use "time out" effectively is also part of this multimedia package. (HTH)

Whitaker's Books in Print

I am pleased to present a work which marks a milestone in the history of public works and, more precisely, in that of permanent structures—a comprehensive dictionary of Civil Engineering terms. Since the beginning of time, Man has always tried to find a means to clear the obstacles which nature erected to displace him. With the first tree trunk thrown across a river, man sought to improve the crossing structure. After the invention of the wheel, and to satisfy his thirst for conquest

(Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.
