Concepts of Biology

In the childhood of every human being and at the dawn of human history there is an amazing and, until now, unexplained leap from simple genetically programmed behavior to language, symbolic thinking, and culture. In *The First Idea*, Stanley Greenspan and Stuart Shanker explore this missing link and offer brilliant new insights into two longstanding questions: how human beings first create symbols and how these abilities evolved and were transmitted across generations over millions of years. From fascinating research into the intelligence of both human infants and apes, they identify certain cultural practices that are vitally important if we are to have stable and reflective future societies.

This chapter also introduces students to the science practices to students and reviews the process of science. Each Unit Opener has been written to pinpoint how the chapters in the Unit relate to the AP Curriculum and the Big Ideas while each chapter opener provides the students with Essential Questions to help guide their reading. The features within the text contain content focused either on one of the AP Big Ideas or on the Nature of Science. Includes: Print Student Edition.

Higher Human Biology: Second Edition

Renowned for her effective learning systems, respected author Sylvia Mader has helped thousands of entry-level students understand and enjoy the principles of human anatomy and physiology. Mader expertly weaves up-to-date informative content with effective learning systems, piecing together the facts and fascination of human anatomy and physiology. With the fifth edition of Understanding Human Anatomy and Physiology, your introductory, one-semester students have the opportunity to experience an effective blend of up-to-date, informational content with several new features and an extensively enhanced multimedia support system.

Human Biology

Instructors consistently ask for a human biology textbook that helps students develop an understanding of the main themes of biology while placing the material in the context of the human body. Mader's Human Biology was developed to fill this void. To accomplish the goal of improving scientific literacy, while establishing a foundation of knowledge in human biology and physiology, Human Biology integrates a tested, traditional learning system with modern digital and pedagogical approaches designed to stimulate and engage today's student. Multimedia Integration: Michael Windelspecht represents the new generation of digital authors. Through the integration of multimedia resources, such as videos, animations and MP3 files, and in the design of a new series of guided tutorials, Dr Windelspecht has worked to bring Dr. Mader's texts to the new generation of digital learners. A veteran of the online, hybrid, and traditional teaching environments, Dr. Windelspecht is well versed in the challenges facing today's students and educators. Dr. Windelspecht guided all aspects of the Connect content accompanying Human Biology. The authors of the text identified several goals that guided them through the revision of Human Biology, Thirteenth Edition: build upon the strengths of the previous editions of the text, enhance the learning process by integrating content that appeals to today's students, deploy new pedagogical elements, including multimedia assets, to increase student interaction with the text, develop a new series of digital assets

Biology

A young woman lies critically injured and comatose in a hospital far from home. Images come and go as she struggles to regain consciousness. Is that a tall, dark man beckoning her from a distance? Will she reach him? Or will her life be cut short? How did she get from being a happy, promising young pre-med student to here? And like this?

Human Biology

Enger/Ross/Bailey: Concepts in Biology is a relatively brief introductory general biology text written for students with no previous science background. The authors strive to use the most accessible vocabulary and writing style possible while still maintaining scientific accuracy. The text covers all the main areas of study in biology from cells through ecosystems. Evolution and ecology coverage are combined in Part Four to emphasize the relationship between these two main subject areas. The new, 14th edition is the latest and most exciting revision of a respected introductory biology text written by authors who know how to reach students through engaging writing, interesting issues and applications, and accessible level. Instructors will appreciate the book's scientific accuracy, complete coverage and extensive supplement package.

Concepts of Biology

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and

includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

This title is directed primarily towards health care professionals outside of the United States. It is written specifically to meet the needs of nursing students undertaking the common foundation programme. It aims to explain how and why sensitive, holistic and evidence-based nursing care is carried out. Therefore it is relevant to students who will enter all branches of nursing and includes material that is both common to all and specific to each branch. The book aims to provide all students on foundation nursing and health care programmes with material of sufficient depth/breadth to achieve the NMC outcomes required for entry into the branch programmes. There is an emphasis not only on the theory that underpins nursing practice in the common foundation programme but also on nursing skills which form an increasingly emphasized part of the programme. The chapters have been reviewed by experts from each branch and also clinical skills to ensure the content reflects each branch accurately and appropriately. Emphasis on clinical skills & lifelong learning Realistic scenarios reinforce the need for patient/client-centred care with a holistic approach Activity boxes for all branches and age groups in each chapter ensure relevance to nurses in diverse settings An integrated approach to health promotion with activity boxes emphasises that health maintenance and promotion are central to contemporary nursing practice Reflection, critical thinking and research/appraisal skills are encouraged with a problem centred approach that will help to develop the skills needed to provide sensitive and effective, high quality care and to integrate theory with practice The emphasis on nursing/clinical skills underlines the importance of
