Comprehensive Handbook of Social Work and Social Welfare, Human Behavior in the Social Environment

This acclaimed work describes a range of counseling and therapy approaches for children who have experienced loss. Practitioners and students are given practical strategies for helping preschoolers through adolescents cope with different forms of bereavement, including death in the family, school, and community. Grounded in research on child therapy, bereavement, trauma, and child development, the volume includes rich case presentations and clearly explains the principles that guide interventions. Eleven reproducible assessment tools and handouts can also be downloaded and printed in a convenient 8 1/2" x 11" size.

Evaluating Stress

This test manual, the fourth in FIT's Sport and Exercise Psychology Test Clearinghouse, is a succinct and informative resource outlining the conceptual basis of the athlete burnout syndrome and its measurement. The manual delineates the process used in developing the ABQ and provides users with information on the meaning of scores derived from its use. Aspects related to the ABQ are presented in a comprehensive manner: Athlete Burnout Questionnaire (ABQ), along with the guidelines for administering and scoring it; Conceptual underpinnings of the ABQ, including an overview of the burnout construct and the operational definition used to guide item development, as well as a description of how the preliminary item pool was developed; Review of research using a within-network approach to examining the internal structure of the burnout construct based on the ABQ; plus a description of both internal consistency and stability of ABQ scores; Discussion of a between-network approach to construct validation by examining the relationship of ABQ scores to theoretically relevant variables stemming from stress, sociological, and motivational perspectives on burnout; Basic descriptive statistical information that can help users interpret the meaning of scores derived from the ABQ.

Supportive Oncology, by Drs. Davis, Feyer, Ortner, and Zimmermann, is your practical guide to improving your patients' quality of life and overall outcomes by integrating palliative care principles into the scope of clinical oncologic practice at all points along their illness trajectories. A multidisciplinary editorial team, representing the dual perspectives of palliative medicine and oncology, offers expert guidance on how to effectively communicate diagnoses and prognoses with cancer patients and their families, set treatment goals, and manage symptoms through pharmacological therapies, as well as non-pharmacological therapies and counselling when appropriate. Integrate complementary palliative principles as early as possible after diagnosis with guidance from a multidisciplinary editorial team whose different perspectives and collaboration provide a well-balanced approach. Effectively communicate diagnoses and prognoses with cancer patients and their families, set treatment goals, and manage symptoms through pharmacological therapies, as well as non-pharmacological therapies and counseling when appropriate. Improve patients' quality of life with the latest information on pain and symptom management including managing side effects of chemotherapy and radiotherapy, rehabilitating and counselling long-term survivors, and managing tumor-related symptoms and other complications in the palliative care setting. Prescribe the most effective medications, manage toxicities, and deal with high symptom burdens.

Adolescence is typically fraught with problems, even under optimal conditions. And when chronic illness is added to the picture, medical and related social issues can complicate, and even disrupt, the course of development. The first text geared toward the integrated care setting, *Behavioral Approaches to Chronic Disease in Adolescence* offers clinicians an evidence-based guide to helping their young clients manage their chronic conditions and treating the psychosocial effects—from school problems and stigma to noncompliance and depression—that frequently follow diagnosis. Expert contributors present up-to-date information on epidemiology, symptoms, comorbid psychosocial problems, and treatment options for a variety of common illnesses, arranged to foster effective interventions for adolescents and efficient collaboration with other care providers in the team. Coverage is comprehensive, authoritative, and accessible, ensuring best practice while respecting each client's individuality: Empirically-based treatment guidelines for illnesses commonly found in youth, including Type 1 and 2 diabetes, asthma, cancer, obesity, and chronic pain. Overview of the physiology of adolescence, particularly as it may be affected by medical conditions, and of adolescent brain development. Latest findings on the role of families in teens' adjustment to illness and treatment. Cultural considerations affecting ethnically diverse clients and their families. Detailed discussions of ethical issues relevant to treating chronically ill young people, and of controversies involving pharmacotherapy with this population. Chapters contain useful handouts for clinicians and clients. *Taking Care of the Practitioner* chapter with helpful strategies for avoiding burnout. Its emphasis on specific practical information makes *Behavioral Approaches to Chronic Disease in Adolescence* a "go-to" reference for health psychologists, child and adolescent mental health practitioners, pediatricians and family practitioners, and clinical social workers.

Psychological Testing and Assessment

This book shows how to recognize, prevent and cure burnout syndrome for nurses, teachers, counselors, doctors, therapists, police, social workers, and anyone else who cares about and for people. Christina Maslach, the leading pioneer in research on burnout, offers help using illustrative examples and first-hand accounts. She points out what causes the feelings of emotional exhaustion, the callous indifference to people's problems, and the sense of inadequacy about one's ability to help and relate to others.

Taking Action Against Clinician Burnout

Today's workforce is experiencing job burnout in epidemic proportions. Workers at all levels, both white- and blue-collar, feel stressed out, insecure, misunderstood, undervalued, and alienated at their workplace. This original and important book debunks the common myth that when workers suffer job burnout they are solely responsible for their fatigue, anger, and don't give a damn attitude. The book clearly shows where the accountability often belongs. . . .squarely on the shoulders of the organization.

Journal of Management

Recognized as the leading measure of burnout, the Maslach Burnout Inventory (MBI) is validated by the extensive research that has been conducted in the more than 25 years since its initial publication. The MBI Surveys address three general scales: --Emotional Exhaustion measures feelings of being emotionally overextended and exhausted by one's work. --Depersonalization measures an unfeeling and impersonal response toward recipients of one's service, care treatment, or instruction. --Personal Accomplishment measures feelings of competence and successful achievement in one's work.

Stress: Concepts, Cognition, Emotion, and Behavior: Handbook in Stress Series, Volume 1, examines stress and its management in the workplace and is targeted at scientific and clinical researchers in biomedicine, psychology, and some aspects of the social sciences. The audience is appropriate faculty and graduate and undergraduate students interested in stress and its consequences. The format allows access to specific self-contained stress subsections without the need to purchase the whole nine volume Stress handbook series. This makes the publication much more affordable than the previously published four volume Encyclopedia of Stress (Elsevier 2007) in which stress subsections were arranged alphabetically and therefore required purchase of the whole work. This feature will be of special significance for individual scientists and clinicians, as well as laboratories. In this first volume of the series, the primary focus will be on general stress concepts as well as the areas of cognition, emotion, and behavior. Offers chapters with impressive scope, covering topics including the interactions between stress, cognition, emotion and behaviour Features articles carefully selected by eminent stress researchers and prepared by contributors representing outstanding scholarship in the field Includes rich illustrations with explanatory figures and tables Includes boxed call out sections that serve to explain key concepts and methods Allows access to specific self-contained stress subsections without the need to purchase the whole nine volume Stress handbook series

Stress: Concepts, Cognition, Emotion, and Behavior

Patient-centered, high-quality health care relies on the well-being, health, and safety of health care clinicians. However, alarmingly high rates of clinician burnout in the United States are detrimental to the quality of care being provided, harmful to individuals in the workforce, and costly. It is important to take a systemic approach to address burnout that focuses on the structure, organization, and culture of health care. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being builds upon two groundbreaking reports from the past twenty years, To Err Is Human: Building a Safer Health System and Crossing the Quality Chasm: A New Health System for the 21st Century, which both called attention to the issues around patient safety and quality of care. This report explores the extent, consequences, and contributing factors of clinician burnout and provides a framework for a systems approach to clinician burnout and professional well-being, a research agenda to advance clinician well-being, and recommendations for the field.

Modelling the Stress-Strain Relationship in Work Settings

Supportive Oncology E-Book

In recent years, health research and policy have come to new understandings of human health through the framework based on knowledge of the determinants of health. This framework has inspired new efforts to explore the impact of psychosocial factors on health. This collection of recent research addresses a variety of psychosocial and social factors in women's health determinants; coping mechanisms that provide havens for people dealing with negative consequences of

poor health. The research papers in this book are from presentations made at an institute June, 2008, in Halifax, Nova Scotia, sponsored by the Section on Women and Psychology (SWAP) of the Canadian Psychological Association. They are a sampler of the contributions that scholars in psychology and related fields are making to understanding women's health.

The rapid and sweeping changes in the economy, technology, work practices and family structures mean that organizational health psychology has never been so essential for understanding stress in the workplace. This timely Research Companion is essential reading to advance the understanding of healthy behaviors within working environments and to identify problems which can be the cause of illness. Containing both theoretical and empirical contributions written by distinguished academics working in Europe, North America and Australia, the book covers leading edge topics ranging from current theories of stress, stress management, and stress in specific occupational groups, such as doctors and teachers, to the relationship of stress with well-being. It provides systematic approaches towards practical actions and stress interventions in working environments and a solid theoretical framework for future research. It will be an essential companion to research on psychology and medicine as well as stress.

This book (vol. 1) presents the proceedings of the IUPESM World Congress on Biomedical Engineering and Medical Physics, a triennially organized joint meeting of medical physicists, biomedical engineers and adjoining health care professionals. Besides the purely scientific and technological topics, the 2018 Congress will also focus on other aspects of professional involvement in health care, such as education and training, accreditation and certification, health technology assessment and patient safety. The IUPESM meeting is an important forum for medical physicists and biomedical engineers in medicine and healthcare learn and share knowledge, and discuss the latest research outcomes and technological advancements as well as new ideas in both medical physics and biomedical engineering field.

Professional Burnout

Emerging Infectious Diseases

The psychological concept of burnout refers to long-term exhaustion from, and diminished interest in, the work we do. It's a phenomenon that most of us have some understanding of, even if we haven't always been affected directly. Many people start their working lives full of energy and enthusiasm, but far fewer are able to maintain that level of engagement. Burnout at Work: A Psychological Perspective provides a comprehensive overview of how the concept of burnout has been conceived over recent decades, as well as discussing the challenges and possible interventions that can help confront this pervasive issue. Including contributions from the most eminent researchers in this field, the book examines a range of topics including: The links between burnout and health How our individual relationships at work can affect levels of burnout The role of leadership in mediating or causing burnout The strategies that individuals can pursue to avoid burnout, as well as wider interventions. The book will be required reading for anyone studying organizational or occupational psychology, and will also interest students of business and management, and health psychology.

South African Journal of Higher Education

The Perceived Workload of ICU Physicians and Physician Extenders and Its Relationship to Burnout, Patient Safety, and Quality of Care

"This book aims to provide professionals and clinicians-in-training with the latest forms of treatment for children and adolescents who have been impacted by crises and trauma. The various treatment options presented here include approaches that focus on the individual as well as many that include a parent in conjoint or filial therapy, and others that employ a family treatment model. Many chapters in this book demonstrate the use of a variety of creative methods with young people who have suffered traumatic experiences such as sexual abuse, bullying, immigration, natural disasters, and witnessing violence"--

The Athlete Burnout Questionnaire Manual

Sport Psychology research has developed and expanded considerably over the last decade or two. Its accelerating volume of research output embraces a wide variety of topics having both academic and practical impact, and relating to other areas of Sports Science and also the broader overall discipline of "mainstream" psychology. In this busy and developing arena, the healthy and productive evolution of a research topic requires the periodic summarisation, reflection, and feedback that is the domain of the literature review. A review acts as the primary catalyst for a topic's emerging organisation, reorganisation and structure, and generates perspectives and pointers for further study directions; it establishes reference points and foundations for continued progress. By its very nature it tends to be a larger publication than a typical focused research paper. The pathways to publication of Sport Psychology research are often severely congested. For example, in 2004, four of the main refereed outlets for original research in Sport Psychology: The Sport Psychologist, the Journal of Applied Sport Psychology, the Journal of Sport and Exercise Psychology, and the Psychology of Sport and Exercise received over 400 submissions (private communications). Inevitably the space that established journals can afford to grant to review articles is limited, both in terms of the article size and the frequency with which topics can be visited. Although reviews that appear in books usually enjoy a larger and more appropriate space allocation, they typically have not carried the hallmark of external independent peer review that journal publication provides. This collection presents a number of contemporary reviews of significant and popular topics from some prominent researchers within each area. An important and distinctive feature of this volume is that all the chapters have been subjected to peer-review by expert referees, a process usually reserved solely for journal publications. This book offers up-to-date literature reviews with a distinctive conceptual, theoretical, and practical focus.

Meni Koslowsky presents here for the first time a way of modelling stress-strain that will enable researchers to both assess examples from the literature and correctly define and use the model in their own investigations. All stages from construction of the model to data analysis are covered, along with possible pitfalls. This book enables investigators to develop and test models for describing stress phenomena in their own settings. It provides an essential research tool for all those who assess stress and strain in their working lives.

Research Companion to Organizational Health Psychology

A rapidly growing number of people experience psychological strain at their workplace. In almost all industrialized

countries, absenteeism and turnover rates increase, and an increasing amount of workers receive disablement benefits because of psychological problems. This book, first published in 1993, concentrates on a specific kind of occupational stress: burnout, the depletion of energy resources as a result of continuous emotional demands of the job. This volume presents theoretical perspectives that had been developed in the United States and Europe, discusses methodological issues, and examines organisational contexts. Written by an international group of leading scholars, this book will be of interest to students of both psychology and human resource management.
