Bibliographic Guide to Theatre Arts

The historic phenomenon of pilgrimage is experiencing a resurgence around the world. A journey resulting from religious causes, it not only provides a spiritual experience, but also one of new environments, cultures and peoples, and is often undertaken as a guided tour. Yet pilgrimage as a mode of tourism has been little investigated. This book adds considerably to our knowledge by focusing on one specific pilgrimage voyage - that to the Holy Land during times of security crisis there. In doing so, it examines this tourism journey in relation to constraints and high levels of risk experienced by the pilgrims. It explores both the behavioural aspects of undertaking pilgrimage to such an insecure situation and the impacts of such crisis on the host tourism infrastructure and industry. It therefore not only provides insights into pilgrimage as tourism - and into this particular country's experience - but also offers an integrative approach to tourism crisis management.

Methods for the Determination of Vitamins in Food

With a foreword by co-creator Julie Plec, the fan-favorite Love You to Death series returns with an essential guide to the fourth season of The CW's hit show The Vampire Diaries. This season four companion delves headlong into the twists and turns of each episode, exploring the layers of rich history, supernatural mythology, historical and pop culture references, and the complexities and motivations of the show's memorable cast of characters. Add expanded chapters on the making of the show, the people who bring the world of Mystic Falls to life, and the intensely loyal audience that keeps it thriving, and you have a guide as compelling and addictive as the show itself. Features exclusive interviews with: co-creator Julie Plec, executive producer Caroline Dries, writer Jose Molina, producer Pascal Verschooris, director Joshua Butler, cinematographer Dave Perkal, editor Tyler Cook, and composer Michael Suby.

The Utilization of Bioremediation to Reduce Soil Contamination: Problems and Solutions

This book is about digital soil morphometrics which is defined as the application of tools and techniques for measuring, mapping and quantifying soil profile properties, and deriving depth functions of soil properties. The book is structured along four research topics: (i) Soil profile properties, (ii) Soil profile imaging, (iii) Soil depth functions, and (iv) Use and applications. The pedon is at the heart of digital soil morphometrics. The use of digital soil morphometrics exceeds the pedology and soil classification purpose that it currently serves - it is used in rapid soil assessment that are needed in a range of biophysical studies. Digital soil morphometrics has the potential to enhance our understanding of soils and how we view them. The book presents highlights from The IUSS Inaugural Global Workshop on Digital Soil Morphometrics held in June 2015 in Madison, USA.

Ancient Jewish Prayers and Emotions

An excellent examination of how the collapse of the Soviet Union and the impact of globalization have brought about changes not only to the territorial configuration sovereignty of states and their boundaries, but also to traditional notions of state, boundaries, sovereignty and social order. These essays focus on the key regional and geopolitical characteristics of this global reordering, with an emphasis on Eastern Europe and South Asia. They discuss the territorial reordering which is taking place at the level of the state as boundaries are redemarcated in line with ethno-territorial demands; as borders are transversed by the movement of peoples, information and finance; and as the lines of territorial demarcation are perceived not only in terms of their fixed characteristics but as part of a process through which regional and ethnic identities continue to be formed and reformed. Each section ends with articles which focus on literature on geopolitics and boundaries. This is an invaluable addition to our understanding of contemporary world affairs.

The World Bank Legal Review, Volume 5

This is the first of a three-volume comprehensive reference work on "Gender across Languages", which provides systematic descriptions of various categories of gender (grammatical, lexical, referential, social) in 30 languages of diverse genetic, typological and socio-cultural backgrounds. Among the issues discussed for each language are the following: What are the structural properties of the language that have an impact on the relations between language and gender? What are the consequences for areas such as agreement, pronominalisation and word-formation? How is specification of and abstraction from (referential) gender achieved in a language? Is empirical evidence available for the assumption that masculine/male expressions are interpreted as generics? Can tendencies of variation and change be observed, and have alternatives been proposed for a more equal linguistic treatment of women and men? This volume (and its follow-up volumes) will provide the much-needed basis for explicitly comparative analyses of gender across languages. All chapters are original contributions and follow a common general outline developed by the editors. The book contains rich bibliographical and indexical material. Languages of Volume 1: Arabic, Belizean Creole, Eastern Maroon Creole, English (American, New Zealand, Australian), Hebrew, Indonesian, Romanian, Russian, Turkish.

The relatively new technique of solid phase microextraction (SPME) is an important tool to prepare samples both in the lab and on-site. SPME is a "green" technology because it eliminates organic solvents from analytical laboratory and can be used in environmental, food and fragrance, and forensic and drug analysis. This handbook offers a thorough background of the theory and practical implementation of SPME. SPME protocols are presented outlining each stage of the method and providing useful tips and potential pitfalls. In addition, devices and fiber coatings, automated SPME systems, SPME method development, and In Vivo applications are discussed. This handbook is essential for its discussion of the latest SPME developments as well as its in depth information on the history, theory, and practical application of the method. Practical application of Solid Phase Microextraction methods including detailed steps Provides history of extraction methods to better understand the process Suitable for all levels, from beginning student to experienced practitioner

Geopolitics at the End of the Twentieth Century

In the course of the project COST 91 *, on the Effects of Thermal Processing and Distribution on the Quality and Nutritive

Value of Food, it became clear that approved methods were needed for vitamin determination in food. An expert group on vitamins met in March 1981 to set the requirements which these methods must meet. On the basis of these requirements, methods were selected for vitamin A, α -carotene, vitamin B1 (thiamine), vitamin C and vitamin E. Unfortunately, for vitamins B2 (riboflavin), B6 and D only tentative methods could be chosen, since the methods available only partially fulfilled the requirements set by the expert group. For niacin and folic acid some references only could be given because none of the existing methods satisfied these requirements, and for vitamin B, vitamin K, pantothenic acid and 12 biotin it was not considered possible to give even references. All methods were carefully described in detail so that every laboratory worker could use them without being an expert in vitamin assay. In October 1983 an enlarged expert group on vitamins approved the compilation of methods and approached a publishing house with a view to publication. The editors wish to thank Dr Peter Zeuthen, the leader of the project COST 91, for his interest in their work, and Mr G.

The two-volume set LNBI 11465 and LNBI 11466 constitutes the proceedings of the 7th International Work-Conference on Bioinformatics and Biomedical Engineering, IWBBIO 2019, held in Granada, Spain, in May 2019. The total of 97 papers presented in the proceedings, was carefully reviewed and selected from 301 submissions. The papers are organized in topical sections as follows: Part I: High-throughput genomics: bioinformatics tools and medical applications; omics data acquisition, processing, and analysis; bioinformatics approaches for analyzing cancer sequencing data; next generation sequencing and sequence analysis; structural bioinformatics and function; telemedicine for smart homes and remote monitoring; clustering and analysis of biological sequences with optimization algorithms; and computational approaches for drug repurposing and personalized medicine. Part II: Bioinformatics for healthcare and diseases; computational genomics/proteomics; computational systems for modelling biological processes; biomedical engineering; biomedical image analysis; and biomedicine and e-health.

This volume will explore the potentially transformative role of effective laws and legal institutions in providing people with more opportunity that is both inclusive and equitable. Laws, legal frameworks and judicial institutions can create opportunity by providing the space to build human capital and assets, create jobs, and encourage individuals and organizations to make productive investments based on a greater sense of stability. They can also promote inclusion by advancing access to jobs and expanding the reach and quality of services including access to justice as well as promote equity by supporting equal opportunities, promoting open and accountable governance, and effective judicial and legal institutions. The objective is to shift focus to laws, legal frameworks and judicial institutions. To this end, submissions will explore the potentially transformative role of effective laws and legal institutions in providing people with more opportunity that is both inclusive and equitable.

Biosystematic Monograph of the Genus Cucumis (Cucurbitaceae)

In the middle of the nineteenth century, the Russian empire made a dramatic advance on the Pacific by annexing the vast regions of the Amur and Ussuri rivers. Although this remote realm was a virtual terra incognita for the Russian educated public, the acquisition of an 'Asian Mississippi' attracted great attention nonetheless, even stirring the dreams of Russia's most outstanding visionaries. Within a decade of its acquisition, however, the dreams were gone and the Amur region

largely abandoned and forgotten. In an innovative examination of Russia's perceptions of the new territories in the Far East, Mark Bassin sets the Amur enigma squarely in the context of the Zeitgeist in Russia at the time. *Imperial Visions* demonstrates the fundamental importance of geographical imagination in the mentalité of imperial Russia. This 1999 work offers a truly novel perspective on the complex and ambivalent ideological relationship between Russian nationalism, geographical identity and imperial expansion.

Cereals are a staple of the human diet and have a significant effect on health. As a result, they are of major significance to the food industry. *Cereal grains for the food and beverage industries* provides a comprehensive overview of all of the important cereal and pseudo-cereal species, from their composition to their use in food products. The book reviews the major cereal species, starting with wheat and triticale before covering rye, barley and oats. It goes on to discuss other major species such as rice, maize, sorghum and millet, as well as pseudo-cereals such as buckwheat, quinoa and amaranth. Each chapter reviews grain structure, chemical composition (including carbohydrate and protein content), processing and applications in food and beverage products. *Cereal grains for the food and beverage industries* is an essential reference for academic researchers interested in the area of cereal grains and products. It is also an invaluable reference for professionals in the food and beverage industry working with cereal products, including ingredient manufacturers, food technologists, nutritionists, as well as policy-makers and health care professionals. A comprehensive overview of all of the important cereal and pseudo-cereal species Chapters review each of the following species: Wheat, Maize, Rice, Barley, Triticale, Rye, Oats, Sorghum, Millet, Teff, Buckwheat, Quinoa and Amaranth Reviews grain structure, chemical composition, processing and applications in food and beverage products for each of the considered grains

Dmitri Shostakovich (1906-75) was one of the greatest composers of the 20th century, as well as the first major Soviet composer. In the fourth edition of *Dmitri Shostakovich Catalogue: The First Hundred Years and Beyond*, Derek C. Hulme names and describes all known musical compositions of the Russian composer. More than 175 major works are annotated and discussed, including such comprehensive details as titles and subtitles, dates of composition, instrumentation, and duration; information on dedications and premieres; arrangements by the composer and others; publication details; notes on bibliographical references and the location of the autograph score; and comprehensive chronological lists of vinyl, compact disc, and visual recordings. The entries are presented chronologically and by opus number, while indexes of names and compositions provide full accessibility. Several appendixes supplement the volume, guiding readers to further information in published sources and providing information on the composer's film, radio, television, and theatre

productions; his abandoned projects and obscure works; and his recordings, including box sets and special USSR recordings. An appendix also discusses the monogram DSCH, a musical motif based on his name that permeates his compositions. This new edition also includes a comprehensive chronological chart of Shostakovich's works and historical events and several plates of memorabilia.

Environmental and agricultural modeling and assessment have a multitude of uses for soil parameters governing retention and transport of water and chemicals in soils. These parameters are notorious for the difficulties and high labor costs involved in measuring them. Good estimates instead of direct measurements may be accurate enough for many applications. Pedotransfer functions provide such estimates by utilizing available soil survey information to translate data we have into data we need. This book is the first book on the topic. It provides the unique compendium of pedotransfer functions, summarizes the vast international experience in this field, and shows how the value of soil data can be increased by using them in pedotransfer functions to predict soil hydrologic and related properties. The book is a rich source of information crucial for environmental research and applications.

This new edition of Van Kampen's standard work has been completely revised and updated. Three major changes have also been made. The Langevin equation receives more attention in a separate chapter in which non-Gaussian and colored noise are introduced. Another additional chapter contains old and new material on first-passage times and related subjects which lay the foundation for the chapter on unstable systems. Finally a completely new chapter has been written on the quantum mechanical foundations of noise. The references have also been expanded and updated.

Published by the American Geophysical Union as part of the Water Science and Application Series, Volume 6. During the past four decades, computer-based mathematical models of watershed hydrology have been widely used for a variety of applications including hydrologic forecasting, hydrologic design, and water resources management. These models are based on general mathematical descriptions of the watershed processes that transform natural forcing (e.g., rainfall over the landscape) into response (e.g., runoff in the rivers). The user of a watershed hydrology model must specify the model parameters before the model is able to properly simulate the watershed behavior.

A Confederacy of Heretics examines the explosion of activity associated with the Architecture Gallery, the first gallery in Los Angeles dedicated exclusively to architecture. Instigated by Thom Mayne in the fall of 1979, the Architecture Gallery staged ten exhibitions in as many weeks by both young and established Los Angeles practitioners, featuring the work of Eugene Kupper, Roland Coate, Jr., Frederick Fisher, Frank Dimster, Frank Gehry, Peter de Bretteville, Morphosis (Thom Mayne and Michael Rotondi), Studio Works (Craig Hodgetts and Robert Mangurian), and Eric Owen Moss. Another young architect, Coy Howard, opened the events with a lecture at the Southern California Institute of Architecture, which hosted talks by each exhibiting architect. In an unprecedented move by the popular press, the events were chronicled in weekly reviews by the critic John Dreyfuss in the Los Angeles Times. Gathering an array of original drawings, models, photographs, video recordings, and commentary alongside new assessments by current scholars, A Confederacy of Heretics aims neither to canonize the participating architects nor to consecrate their unorthodox activities. Rather, the book re-examines the early work of some of Los Angeles' most well-known architects, charts the development of their most potent design techniques, and documents a crucial turning point in Los Angeles architecture, a time when Angeleno architecture culture shifted from working local variations on imported themes to exporting highly original disciplinary innovations with global reach. Taken together, the exhibition, symposium, and catalog that comprise A Confederacy of Heretics offer a unique lens through which to analyze a pivotal moment in the development of late twentieth-century architecture.

CBIP is the complete reference and buying guide to English-language Canadian books currently in print; consequently, the Author and Title Index, Subject Index and microfiche editions are indispensable to the book profession. With submissions from both small and large publishers, CBIP provides access to titles not listed anywhere else. Containing more than 48,000 titles, of which approximately 4,000 have a 2001 imprint, the Author and Title Index is extensively cross-referenced. The Subject Index lists the titles under 800 different subject categories. Both books offer the most complete directory of Canadian publishers available, listing the names and ISBN prefixes, as well as the street, e-mail and web addresses of more than 4,850 houses. The quarterly microfiche service provides updated information in April, July and October. CBIP is

constantly referred to by order librarians, booksellers, researchers, and all those involved in book acquisition. In addition, CBIP is an invaluable record of the vast wealth of publishing and writing activity in the scientific, literary, academic and arts communities across Canada. A quarterly subscription service including the annual Author and Title Index (March 2001) plus quarterly microfiche updates (April, July, and October 2001) is also available. The reference work "Science of Synthesis: Catalytic Transformations via C-H Activation" covers the state of the art in C-H activation chemistry. Experts in the field present the best synthetic methods including typical or general experimental procedures. As such, this two volume set can serve as both a basis for the practical application of the techniques discussed, and as an educational resource to lay the foundations for future research. Volume 2 concerns the formation of C—C bonds by C—H activation of non-(het)arene substrates as well as C—H activation using special reagents or techniques. The formation of C—heteroatom bonds by predominantly arene C—H activation is also reviewed. For C—C bond formation, the material is subdivided into allylic, alkyl, and double C—H activation techniques, coupling using carbenes or radicals, and carbonylation or carboxylation processes.

The book entitled "Current Debates In Tourism & Development Studies" includes 10 chapters written by researchers in the field of tourism and development. It is divided into four themes, each theme exploring current tourism and development issues that are of critical importance. The key themes of the book concern transforming tourism-resident perception (theme 1), alternative tourism (theme 2), event tourism and destination image (theme 3), and development studies (theme 4). The book has following specific objectives: (a) to identify and analyze the current debates of tourism; (b) to examine current key tourism trends, issues and challenges; (c) to provide comprehensive review of tourism and development over the years; (d) to implement rural development, behavioral economics and demographic dividend and economic growth issues. It is our strong believe that these chapters will contribute to the understanding of current debates in tourism and development. Furthermore, each chapter in the book will make a significant platform for both tourism industry and academia.

Science of Synthesis: Catalytic Transformations via C-H Activation Vol. 2

Traditional reliance on chemical analysis to understand the direction and extent of treatment in a bioremediation process has been found to be inadequate. Whereas the goal of bioremediation is toxicity reduction, few direct, reliable measures of this process are as yet available. Another area of intense discussion is the assessment of market forces contributing to the acceptability of bioremediation. Finally, another important component is a series of lectures and lively exchanges devoted to practical applications of different bioremediation technologies. The range of subjects covers a wide spectrum, encompassing emerging technologies as well as actual, full-scale operations. Examples discussed include landfarming, biopiling, composting, phytoremediation and mycoremediation. Each technology is explored for its utility and capability to provide desired treatment goals. Advantages and limitations of each technology are discussed. The concept of natural attenuation is also critically evaluated since in some cases where time to remediation is not a significant factor, it may be an alternative to active bioremediation operations.

Preparative Layer Chromatography explains how this method is used for separating large quantities of mixtures containing a wide variety of important compounds. It offers a broad review of preparative layer chromatography (PLC) applications and adaptable working procedures for microseparations involving organic, inorganic, and organometallic compounds. The book contains theoretical background, chemical principles, and relevance of preparative layer chromatography (PLC) to a wide range of applications, particularly in the study of pharmaceuticals and biochemistry. Written by many of the best known and most knowledgeable specialists in the field, the chapters describe all the necessary techniques, current procedures, and superior strategies for selecting the most suitable eluents and designing application-specific PLC systems based on the data being sought. They provide comprehensive instructions, surrounding issues, and suggestions for optimizing optional

working techniques within the framework of PLC. The book also provides a complete coverage of bulk sorbents and precoated chromatographic plates available on the international market. A comprehensive, yet accessible source of information, Preparative Layer Chromatography is a relevant and practical text for experienced as well as novice researchers and practitioners involved in analytical, environmental, geochemical, biological, medicinal, and pharmaceutical analysis.
