### **The Yashica Guide**

This work reviews the current state of the art in metallic microlattice structures, manufactured using the additive manufacturing processes of selective laser melting, electron beam melting, binder jetting and photopolymer wave guides. The emphasis is on structural performance (stiffness, strength and collapse). The field of additively manufactured metallic microlattice structures is fast changing and wide ranging, and is being driven by developments in manufacturing processes. This book takes a number of specific structural applications, viz. sandwich beams and panels, and energy absorbers, and a number of conventional metallic materials, and discusses the use of additive manufactured metallic microlattice structures to improve and enhance these structural performances. Structural performances considered includes such non linear effects as plasticity, material rupture, elastic and plastic instabilities, and impact loading. The specific

discussions are put into the context of wider issues, such as the effects of realisation processes, the effects of structural scale, use of sophisticated analysis and synthesis methodologies, and the application of existing (conventional) structural theories. In this way, the specific discussions are put into the context of the emerging general fields of Architected (Architected) Materials and Mechanical Metamaterials.

"A first computer can be confusing and intimidating at any age. Luckily, 'Computers For Seniors For Dummies' is here to help the over-55 crowd conquer the uncertainty and fear with clear-cut, easy-to-understand steps on how to get the most out of your new computer. Inside, you'll find step-by-step guidance on getting started, from turning the computer on and using the keyboard and mouse to finding your way around the new Windows 9 operating system. In no time, you'll confidently navigate your way around your new computer to email with family and friends, stay connected on social media, shop securely online, research topics of interest, find recipes and diet tips, and so much more. The computer has become a household and business mainstay and continues to change the way people communicate, work, shop, invest, and spend their free time. Whether you're looking to use a computer for bookkeeping, making travel plans, socializing, shopping, or just plain fun, this clear and friendly guide takes the intimidation out

One of George Daniels's central contributions to horology is his co-axial escapement. Having observed that the dominant lever escapement begins to change its rate after a year or two - a disturbance caused by the sliding action of the impulse elements of the escapement - Daniels set about developing a mechanism that avoided this problem. The result of his efforts was the co-axial escapement, a mechanism in which he sought to combine the strengths and eliminate the deficiencies of existing watch escapements, the lever escapement foremost among them. First devised in 1977, today it remains largely the same as fitted in watches of Daniels's own manufacture, as well as those of several wrist-watch manufacturers. This book explains the action of the escapement in terms

Nineteen Fifty-Seven is much more than a look at Prairie life after World War II. With sections on Women, Family, Memories, Work, Writing and Music - these poems are an exploration on what makes life worth living. In plain language, McLean weaves fascinating, sentimental images of Moose Jaw and the Prairie landscape, as well as stories of workers and the railroads. At the same time, McLean creates a separate persona to move in and out of darker poems on death, suicide, alcoholism and voyeurism. Through poems such as "my brother, who I looked out for when we were kids", "After" and "about MacKay", McLean delves into the heart of humanity: what keeps us alive, and what shapes our past, present, and future.

This volume presents the current state of laser-assisted bioprinting, a cutting edge tissue engineering technology. Nineteen chapters discuss the most recent developments in using this technology for engineering different types of tissue. Beginning with an overview, the discussion covers bioprinting in cell viability and pattern viability, tissue microfabrication to study cell proliferation, microenvironment for controlling stem cell fate, cell differentiation, zigzag cellular tubes, cartilage tissue engineering, osteogenesis, vessel substitutes, skin tissue and much more. Because bioprinting is on its way to becoming a dominant technology in tissue-engineering, Bioprinting in Regenerative Medicine is essential reading for those researching or working in regenerative medicine, tissue engineering or translational research. Those studying or working with stem cells who are interested in the development of the field will also find the information

invaluable.

Additive Manufacturing (AM) has altered manufacturing as we know it, with shortened development time, increased performance, and reduced product costs. Executive management in industry are bombarded by marketing from their competitors showcasing design solutions leveraged through AM. Therefore, executive management ask their project management teams to figure out how to utilize AM within their own company. Clueless on how to approach the problem, managers start learning about AM from experts and become overwhelmed at the highly technical information. Unlike other AM books that focus on the technical output of AM technology, this new book focuses solely on the managerial implementation. Features Presents the impacts of AM technology Provides engaging, practical, and entertaining "war stories" from the front line of AM industrialization Describes in detail, the significant hurdles in AM certification and implementation Offers templates of proven change management best practices, as practical solutions Omits the technical verbiage that gets in the way of management understanding how the process is implemented

Beauty--the book, born out of Cooper Hewitt, Smithsonian Design Museum's 2015 Triennial of the same name, curated by Andrea Lipps and Ellen Lupton--showcases some of the most exciting and provocative design created around the globe during the past three years. These pages aim not to emphasize the hidden beauty in the everyday--a beloved teapot or favorite shoe--but to locate transformational beauty in contemporary design that is exuberant, ethereal, atmospheric, experiential, exceptional or sublime. Sixty-two designers represent a vast range of disciplines from architecture, fashion, digital, graphic, and product design, to interiors, hair, nail and lighting design. The objects featured cause us to take pause, catch our breath and get lost in our pursuit to understand or explain them. Designed by the innovative Kimberly Varella, the book is itself a tactile, fluid and provocative interpretation of beauty. Varella's design provides unexpected points of entry, playing with the concepts of beauty by using reflective surfaces, hot pink thread weaving pages together and a "heart" of the book, from which all else flows. Ethereal, Intricate, Extravagant, Transformative, Transgressive, Elemental and Emergent Beauty are the seven themes. Each section includes the individual

The digital manufacturing revolution is upon us, and at its current center is the 3D printer. Arguably the most powerful machine ever invented, its possibilities are endless. In *3D Printing Will Rock the World*, author John Hornick presents an insightful look at how 3D printing could potentially change the planet. 3DPrintingIndustry.com said "John Hornick's '3D Printing Will Rock the World' Rocks." 3DPrintingStocks.com called it a "must read." To see what industry experts say, see the back cover. With chapters titled "Morphing Manufacturing," "Merging Science and Nature," "Shrinking the World and Bringing Jobs Home," "3D Printing New Kinds of Crime," and "Rocking Kids' Futures," Hornick discusses a wide range of topics, including the impact of 3D printing on business and personal life, how mass production could be replaced with production by the masses, 3D printing's legal (and illegal) side effects, and how today's kids will 3D print our future. For fans of *Fabricated: The New World of 3D Printing* by Hod Lipson and Melba Kurman and *Makers: The New Industrial Revolution* by Chris Anderson, this visionary book is an essential addition to the library of CEOs, investors, makers, and anyone interested in the future of manufacturing.
