Blackwell's Five-Minute Veterinary Consult: Ruminant

This revision reflects major updating, expansion of hot topics, and coverage of trends, current areas of research interest, and controversies in veterinary acupuncture. The book begins with the history and concepts of acupuncture and continues with the anatomic and neurophysiologic basis of acupuncture, research on acupuncture, practical techniques, instrumentation, and point selection. Part two covers acupuncture in small animals, including a canine atlas, avian acupuncture, and chapters that focus on disorders grouped by body systems. Part three is devoted to acupuncture in large animals. It begins with three different

This user-friendly book is aimed at helping students of Mandarin Chinese learn and remember Chinese characters. At last—there is a truly effective and enjoyable way to learn Chinese characters! This book helps students to learn and remember both the meanings and the pronunciations of over 800 characters. This otherwise daunting task is made easier by the use of techniques based on the psychology of learning and memory. key principles include the use of visual imagery, the visualization of short "stories," and the systematic building up of more complicated characters from basic building blocks. Although Learning Chinese Characters is primarily a book for serious learners of Mandarin Chinese, it can be used by anyone

with an interest in Chinese characters, without any prior knowledge of Chinese. It can be used alongside (or after, or even before) a course in the Chinese language. All characters are simplified (as in mainland China) but traditional characters are also given, when available. Key features: Specially designed pictures and stories are used in a structured way to make the learning process more enjoyable and effective, reducing the need for rote learning to the absolute minimum. The emphasis throughout is on learning and remembering the meanings and pronunciations of the characters. Tips are also included on learning techniques and how to avoid common problems. Characters are introduced in a logical sequence, which also gives priority to learning the most common characters first. Modern simplified characters are used, with pronunciations given in pinyin. Key information is given for each character, including radical, stroke-count, traditional form, compounds, and guidance on writing the character. This is a practical guide with a clear, concise and appealing layout, and it is well-indexed with easy look-up methods. The 800 Chinese characters and 1,033 compounds specified for the original HSK Level A proficiency test are covered.

Bacterial pathogens have been becoming the main problem in hospital and community-acquired infections. It is hard to treat the strains that are resistant to antibiotics, due to the causing recurrent and untreatable infections. In recent years, the combination treatments and the novel technologies have been preferred to overcome the emergence of antibacterial resistance of pathogens. In this book, examples of pathogenesis by clinical cases, control by antibiotics and bioactive antimicrobials, control by novel technologies with the collection of up-to-date researches and reviews are presented. This book can be useful for researchers interested in antibacterials, bioactive compounds, and novel technologies.

Wood is a natural building material: if used in building elements, it can play structural, functional and aesthetic roles at the same time. The use of wood in buildings, which goes back to the oldest of times, is now experiencing a period of strong expansion in virtue of the sustainable dimension of wood buildings from the environmental, economic and social standpoints. However, its use as an engineering material calls for constant development of theoretical and

experimental research to respond properly to the issues involved in this. In the single chapters written by experts in different fields, the book aims to contribute to knowledge in the application of wood in the building industry.

Pediatrics of Common and Uncommon Species, An Issue of Veterinary Clinics: Exotic Animal Practice - E-Book

My prayer to the one true, almighty God, of whom, and through whom, and in whom are all things, has been, and is now, that in opposing and refuting the heresy of you Manichæans, as you may after all be heretics more from thoughtlessness than from malice, He would give me a mind calm and composed, and aiming at your recovery rather than at your discomfiture. For while the Lord, by His servants, overthrows the kingdoms of error, His will concerning erring men, as far as they are men, is that they should be amended rather than destroyed. And in every case where, previous to the final judgment, God inflicts punishment, whether through the wicked or the righteous, whether through the unintelligent or through the intelligent, whether in secret or openly, we must believe that the designed effect is the healing of men, and not their ruin; while there is a preparation for the final doom in the case of those who reject the means of recovery. Thus, as the universe contains some things which serve for bodily punishment, as fire, poison, disease, and the rest, and other things, in which the mind is punished, not by bodily

distress, but by the entanglements of its own passions, such as loss, exile, bereavement, reproach, and the like; while other things, again, without tormenting are fitted to comfort and soothe the languishing, as, for example, consolations, exhortations, discussions, and such things; in all these the supreme justice of God makes use sometimes even of wicked men, acting in ignorance, and sometimes of good men, acting intelligently.

The Dog Cancer Survival Guide

These Tibetan Buddhist teachings provide instructions for gathering and harnessing basic life energy. According to the tradition, a very effective way to do this is to arouse sexual energy and to direct the essence of that energy toward spiritual realization. According to the philosophy, sexual energy brings one naturally and effortlessly into flow with creativity and awareness in both mind and body—when used skillfully by committed practitioners with appropriate training. These ancient texts, attributed to the great Tibetan meditation master Padmasambhava (who practiced sexual union with the famous Tibetan queen Yeshe Tsogyal), offer traditional Buddhist teachings on the nature of the elements that all beings and our world are made of. They show us a practical view of how to use life-energy for personal development. The teachings are for experienced Buddhist practitioners.

This book covers interesting research topics and the use of natural resources for medical treatments in some severe diseases. The most important message is to have native foods which contain high amount of active compounds that can be used as a medicinal plant. Most pharmaceutical drugs were discovered from plants, and still ongoing research will have to predict such new active compounds as anti-diseases. I do believe this book will add significant knowledge to medical societies as well as can be used for postgraduate students.

disease, obesity, Alzheimer's disease and /or osteoporosis. Dr Campbell illuminates the connection between nutrition and these often fatal diseases and reveals the natural human diet. He also examines the source of nutritional confusion produced by powerful lobbies, government entities and opportunist scientists. Part medical thriller, part governmental exposé.

Goat Science

Goat science covers quite a wide range and varieties of topics, from genetics and breeding, via nutrition, production systems, reproduction, milk and meat production, animal health and parasitism, etc., up to the effects of goat products on human health. In this book, several parts of them are presented within 18 different chapters. Molecular genetics and genetic improvement of goats are the new approaches of goat development. Several factors affect the passage rate of digesta in goats, but for diet properties, goats are similar to other ruminants. Iodine deficiency in goats could be dangerous. Assisted reproduction techniques have similar importance in goats like in other ruminants. Milk and meat production traits of goats are almost equally important and have significant positive impacts on human health. Many factors affect the health of goats, heat stress being of increasing importance. Production systems could modify all of the abovementioned characteristics of goats.

When one defines "order" as a sorting of priorities, it becomes beautifully clear as to what Foucault is doing here. With virtuoso showmanship, he weaves an intensely complex history of thought. He dips into literature, art, economics and even biology in *The Order of Things*, possibly one of the most significant, yet most overlooked, works of the twentieth century. Eclipsed by his later work on power and discourse, nonetheless it was *The Order of Things* that established Foucault's reputation as an intellectual giant. Pirouetting around the outer edge of language, Foucault unsettles the surface of literary writing. In describing the limitations of our usual taxonomies, he opens the door onto a whole new system of thought, one ripe with what he calls "exotic charm". Intellectual pyrotechnics from the master of critical thinking, this book is crucial reading for those who wish to gain insight into that odd beast called Postmodernism, and a must for any fan of Foucault.

This report is structured in five parts: national framework for traditional and complementary medicine (T&CM); product regulation; practices and practitioners; the challenges faced by countries; and, finally, the country profiles. Apart from the section on practices and practitioners, the report is consistent with the format of the report of the first global survey in order to provide a useful comparison. The section on practices and practitioners, which covers providers, education and health insurance, is a new section incorporated to reflect the emerging trends in T&CM and to gather new information regarding these topics at a national level. All new information received has been incorporated into individual country profiles and data graphs. The report captures the three phases of progress made by Member States; that is, before and after the first WHO Traditional Medicine Strategy (1999-2005), from the first global survey to the second global survey (2005-2012) and from the second survey to the most recent timeline (2012-2018).

Chinese Medical Therapies for Diabetes, Infertility, Silicosis and the Theoretical Basis

Traditional Chinese medicine (TCM) is the world's most comprehensive alternative and complementary medicine. With the rising morbidity of serious illnesses like diabetes, infertility, silicosis, etc., there are no highly effective treatments; even though Western medicine has made spectacular advances, this influenced us to seek Chinese medical therapies of health care. This book offers a unique perspective of Chinese medicine theories and therapies. It has practical chapters on diabetes, infertility, silicosis, kidney essence, and a compilation of contraindicated Chinese medicines for pregnancy. TCM is a treasure, and this ancient wisdom should be respected and applied to the modern medical system; it will provide more choices and a wider field of vision for Western medicine at the two cognitive crossroads of East and West.

The field of pain research is rapidly expanding in both human and veterinary medicine, and has helped increase our understanding of acupuncture. However, many are still highly sceptical about the use of acupuncture and prefer for it to remain far from orthodox veterinary practice. This book seeks to challenge common misgivings by showing how veterinary acupuncture works (for small and large animals), and why it should be established as an orthodox form of treatment. Written from a Western approach, rather than a traditional Chinese Medicine approach, it explains the background and history of acupuncture and includes key information on safety aspects, understanding pain and how acupuncture can help, practical aspects such as types of needles and methods of restraint, and related techniques. Not intended as a techniques manual, this book is a preparatory text for those considering taking an acupuncture course and those wishing to gain a solid understanding of the subject.
