Workbook

This text helps students hit the road with a practical set of tools, and the confidence they need to use those tools effectively in making business decisions. The goal is to introduce a new Principles of Accounting text that better reflects a more conceptual and decision-making approach to the material. The authors have taken a new "macro- to micro-" approach to the Principles of Accounting course by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle (although the Accounting Cycle is thoroughly covered in Chapters 3 and 4). The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. They motivate students by grounding the discussion in the real world, showing them the relevance of the topics covered to their future career.

College Accounting

College Accounting provides the beginning accounting student with the fundamentals of financial accounting through clear, concise, and easy-to-read text with examples and practice opportunities along the way. community colleges professors, DeAnna Martin and Jill Mitchell, this resource is the perfect blend of solid, time-tested content and a new streamlined design of embedded charts, lists, and illustrations that help students grasp difficult concepts.
